

PORTAL QA · ROUND 4 (DEEP)

Home page deep audit

Round 4 deep audit. 5 items shipped this round (Delegate, card click, View all 26, MY PROJECTS removed, buckets sum). Two coupled HIGH items still open (My Tasks card structure + days-overdue stamp). One HIGH wiring carry-over (Portfolio Health vs Clients filter mismatch). Below-the-fold differences include the per-day kebab on the schedule grid.

Round 4 deep findings: 5 done · 5 open · 2 fyi

Status legend: **DONE** shipped · **OPEN** needs work · **NO ACTION** acceptable.

This document is interactive. Build checklist on the last page lists every still-open item. Tick each as it ships, save the PDF.

Still open

Each entry: where it stood (lineage from previous rounds), round 4 status, and what's left.

HIGH

OPEN

#1. My Tasks card structure: client-grouped with urgency

Where to see: Home page → MY TASKS section. Compare each card's structure (title, ON FIRE pill, aggregate count line, blocking-reason caption, days-overdue stamp) to our build.

Where it stood: Round 1 + 2: each card should represent an on-fire client (with ON FIRE pill, aggregate count, blocking-reason caption), not an individual task.

Round 4 status: No change. Portal still shows individual tasks with NO DUE DATE neutral status. The data shape underneath hasn't switched from per-task to per-client. Side-by-side: ours "Acme Corporation / 5 overdue · 1 blocked / Blocked: Budget approval stalled / 12 days overdue" vs portal "Review new ClickUp changes / 121 Group - AI Transformation - 1142680 / No due date".

What's left: Switch the data source to group My Tasks by parent client. Surface only on-fire clients. Add the ON FIRE pill, aggregate count, blocking-reason caption, and most-overdue days-stamp on right.

HIGH

OPEN

#2. Days-overdue stamp on each My Tasks card

Where to see: Home page → MY TASKS card → far-right of the card, where the days-overdue stamp should live.

Where it stood: Round 1 + 2: right-aligned "X days overdue" stamp on each card.

Round 4 status: No change. Each card still shows "No due date" because cards still represent individual tasks. The stamp will surface naturally once item #1 lands.

What's left: Comes for free once item #1 ships.

HIGH

OPEN

#7. Portfolio Health vs Clients filter ON FIRE count mismatch

Where to see: Home page → click ON FIRE in Portfolio Health. You'll land on /clients?view=fire. Compare the On Fire chip count there to the 14 from Portfolio Health.

Where it stood: Round 3 W4. Round 3 W5 (buckets don't sum) is now FIXED, but the W4 mismatch persists.

Round 4 status: Home Portfolio Health says ON FIRE 14. Clicking lands on /clients?view=fire which says On Fire 0. Two count sources still disagree.

What's left: Single-source the count: pick whichever query produces the correct ON FIRE list and route both surfaces through it. Add a unit test asserting `Home.fireCount === Clients.filter('fire').count`.

MED

OPEN

#8. MY SCHEDULE day cards missing per-day kebab menu

Where to see: Home page → scroll down past MY TASKS → MY SCHEDULE section → header of each day card. Compare to our build (which has a kebab menu on each day card).

Where it stood: Not flagged previously; surfaced in round 4 deep audit.

Round 4 status: Our day cards have a "..." kebab menu in the header for per-day actions (open all tasks for that day, add task to that day). Portal day cards only show the 0/6 progress badge — no kebab.

What's left: Add the per-day kebab menu to each day card. Common actions: open all tasks for the day, add a task to the day, mark the day blocked.

LOW

OPEN

#11. MY TASKS bell icon: hollow vs filled

Where to see: Home page → MY TASKS section header → bell icon to the left of the eyebrow text.

Where it stood: Not flagged previously.

Round 4 status: Both use a bell icon for the MY TASKS section header. Portal version reads slightly thinner; ours is filled. Cosmetic, low priority.

What's left: Match the icon weight (filled bell). Pull from Heroicons /24/solid/BellIcon if portal is currently using /24/outline.

HIGH

OPEN

#12. Review button doesn't deep-link to the task card modal

Where to see: Home page → MY TASKS card → click the Review button. Notice you land on the kanban board but the specific task's modal does NOT auto-open.

Where it stood: Not previously documented. User-flagged in round 4 follow-up.

Round 4 status: Click on Review on a My Tasks card navigates to the correct kanban board (e.g. "Review new ClickUp changes" lands on /board/hubstaff-3795488) but the specific task's card modal does NOT open. The user is dropped on a kanban with 73 tasks and has to scan for the one they were supposed to review. The whole point of the Review button is to surface that exact task.

What's left: Wire Review to deep-link to the card modal. URL pattern matches our build: /board//card/. On board mount, if the URL has a card path, auto-open the matching card modal. App.tsx already has this routing pattern for our build's notifications — same shape applies.

Done

Items shipped (this round or earlier) and still working.

HIGH

DONE

#3. Delegate button now opens a delegation popover

Where to see: Home page → MY TASKS card → Delegate + Review buttons on the right of each card. Click Delegate to verify the popover opens.

Where it stood: Round 3 W1: Delegate was a dead button.

Round 4 status: Click opens a "Delegate task" popover with an "Assign to" search field + sortable team-member list (job titles render correctly). Done.

MED

DONE

#4. My Tasks card body navigates to the service board

Where to see: Home page → scroll down past MY SCHEDULE → MY BOARDS section.

Where it stood: Round 3 W2: card body was not clickable.

Round 4 status: Click on the card title (anywhere on the body) navigates to the service kanban. Done.

MED

DONE

#5. "View all 26 tasks" link expands the list

Where it stood: Round 3 W3: link rendered but click did nothing.

Round 4 status: Click expands the list inline to show the full set of My Tasks cards. Done.

MED

DONE

#6. MY PROJECTS section removed

Where to see: Home page → previously rendered below MY BOARDS. Verify the section is now removed.

Where it stood: Round 2 #7: MY PROJECTS coexisted with MY BOARDS, undermining the favoriting model.

Round 4 status: Section is gone. Page now ends at MY BOARDS. The favoriting model is the single source of truth for quick-access boards. Done.

INFO

DONE

#9. MY BOARDS section + count + empty state

Where to see: Home page → scroll down past MY SCHEDULE → MY BOARDS section. Look for star icon, eyebrow, count badge, and the favorited services or empty state.

Where it stood: Round 2 #4 fix.

Round 4 status: Star icon + "MY BOARDS" eyebrow + count badge ("1 pinned" or empty state "No boards favorited yet" + Browse clients link). Pinned card click navigates correctly. Done.

INFO

DONE

#10. Greeting + subtitle + date eyebrow

Where to see: Home page → very top, above PORTFOLIO HEALTH. Date eyebrow + greeting + subtitle.

Where it stood: Round 2 #5 fix.

Round 4 status: FRIDAY, MAY 8 eyebrow + "Good afternoon, Nikko." greeting + "X clients need you now." subtitle (matches Portfolio Health ON FIRE count). Done.

Build checklist

Every still-open item from above. Tick each as it ships.

- ☐ **HIGH** **#1. My Tasks card structure: client-grouped with urgency**
Switch the data source to group My Tasks by parent client. Surface only on-fire clients. Add the ON FIRE pill, aggregate count, blocking-reason caption, and most-overdue days-stamp on right.
- ☐ **HIGH** **#2. Days-overdue stamp on each My Tasks card**
Comes for free once item #1 ships.
- ☐ **HIGH** **#7. Portfolio Health vs Clients filter ON FIRE count mismatch**
Single-source the count: pick whichever query produces the correct ON FIRE list and route both surfaces through it. Add a unit test asserting `Home.fireCount === Clients.filter('fire').count`.
- ☐ **MED** **#8. MY SCHEDULE day cards missing per-day kebab menu**
Add the per-day kebab menu to each day card. Common actions: open all tasks for the day, add a task to the day, mark the day blocked.
- ☐ **LOW** **#11. MY TASKS bell icon: hollow vs filled**
Match the icon weight (filled bell). Pull from Heroicons `/24/solid/BellIcon` if portal is currently using `/24/outline`.
- ☐ **HIGH** **#12. Review button doesn't deep-link to the task card modal**
Wire Review to deep-link to the card modal. URL pattern matches our build: `/board//card/`. On board mount, if the URL has a card path, auto-open the matching card modal. App.tsx already has this routing pattern for our build's notifications — same shape applies.
