

PORTAL QA · ROUND 5 (DEEP)

Clients page deep audit

Round 5 verification of the Clients page against the dev's latest build. 12 of 21 round 4 items shipped: Add client modal, Add service modal, header fields, single semantic pill, project/retainer split, empty-state copy, Onboarding tab labels, progress label, Edit Services inline flow, and the Details panel removal. Major round. Two MED items still open (industry line, subtitle template+due), plus NEEDS ATTENTION partial and a few low-cost polish items.

Round 5 verification: **12** done · **4** partial · **3** still open · **1** deferred · **1** new

Status legend: **DONE** shipped · **PARTIAL** partial fix · **STILL OPEN** not yet · **DEFERRED** later pass · **NEW** fresh sweep.

How to read this. Each item carries the round 4 finding ("Round 4 status"), the verification result against the dev's current build ("Round 5 status"), and what's left if it's not fully done. The build checklist on the final page lists every open item that still needs work.

Shipped this round

Round 4 items the dev has now closed. Each is verified against the live build.

HIGH**DONE**

#4. Portfolio Health vs Clients filter ON FIRE count mismatch

Where to see: Clients → On Fire filter chip. Compare to Home > Portfolio Health > ON FIRE count.

Round 4 status: Home said ON FIRE 14; Clients filter said On Fire 0. Mismatch.

Round 5 status: Both surfaces now agree (Home ON FIRE 0, Clients On Fire 0). Single-source confirmed.

HIGH**DONE**

#5. Client detail header now carries the four key fields

Where to see: Clients → click any client → detail header card at the top of the right pane.

Round 4 status: Portal header rendered only the avatar + client name + kebab.

Round 5 status: All four fields are now present in the header: STATUS pill (e.g. "● On Track" rendering with the right color), industry row (icon + value or "—" placeholder), MANAGER row ("Manager: None assigned" when empty), and a calendar-icon row for the client-since date (also "—" when empty). The structure matches our build; populating the fields is now just a data concern, not a UI gap.

HIGH**DONE**

#7. Add client modal now renders with all required fields

Where to see: Clients → top of the left pane → click '+ Add client'.

Round 4 status: Click handler fired but no modal appeared.

Round 5 status: Modal renders with every required field: Client Name *, Industry *, Website, Account Manager * (Select a team member dropdown), Starting Status (Prospect card), Contacts > Primary contact (Full name, Position/Role, Email address, Mobile number), "+ Add another contact" link, Cancel + Create Client buttons. Validation appears wired (Create stays disabled until required fields are filled).

What's left: Minor: round 4 noted the starting-status preset on our build is "Onboarding (first 30 days)". Portal shows only a "Prospect" card. Confirm whether the status field should expose all states (Prospect, Onboarding, Active, etc.) or just default to Onboarding. Small polish item — not blocking.

HIGH**DONE**

#8. Add service modal: full template-driven flow now in place

Where to see: Clients → click any client → Overview tab → click '+ Add service'.

Round 4 status: Modal had only Service Name + Cancel/Create. Whole template-driven flow was missing.

Round 5 status: Modal now matches our build: SERVICE NAME input + TYPE selector (Project / Retainer cards with their subtitles) + TEMPLATE dropdown (default "No template") with explanatory subtitle ("Seeds the board with starter columns and a few example cards.") + NEXT DELIVERABLE DATE picker + Cancel/Create buttons. Title is now lowercase ("Add service") which also clears the round 4 #22 nit.

What's left: Smoke test once: create a service with a non-empty template selected and confirm the kanban gets seeded with the template's starter columns + example tasks. If that part is wired, this is fully done.

MED

DONE

#10. Client list service tags now show service names, not ad platforms

Where to see: Clients → client list rows → tag chips below each client name.

Round 4 status: Portal chips were ad platforms ("Google Ads", "Meta Ads").

Round 5 status: Chips now show service names. Examples on screen: BELLE ET BLANC shows "Account Management", "Belle et Blanc - Design...", "Belle et Blanc - Logo D..."; Bruce Rock Engineering shows "BRE - Wordpress Websi...", "Bruce Rock Engineering..."; Central Innovation shows "Central Innovation - Me...", "Central Innovation - Ac...". Truncation with "+N more" overflow is also present.

MED

DONE

#11. Service rows now use a single semantic pill (no redundant Active)

Where to see: Clients → click any client → Overview tab → ACTIVE SERVICES list → status pills on each service row.

Round 4 status: Two pills side-by-side ("Active" + "On Track").

Round 5 status: Each service row now shows a single semantic pill: "On Fire" (red) or "On Track" (green). "Active" pill is gone. Matches our build.

MED

DONE

#13. ACTIVE SERVICES eyebrow now shows the project/retainer split

Where to see: Clients → click any client → Overview tab → ACTIVE SERVICES eyebrow.

Round 4 status: Just "X of X active" with no breakdown.

Round 5 status: Eyebrow now reads "ACTIVE SERVICES 5 projects, 0 retainers" (count + split by service.type). Matches our build.

LOW

DONE

#16. Empty-state copy + icon on the right pane now match

Where to see: Clients → right pane when no client selected.

Round 4 status: Portal: person silhouette icon + "services and activity" (no "and notes"). Ours: envelope + "services, activity, and notes".

Round 5 status: Portal now renders the envelope icon + "Pick a row on the left to see their services, activity, and notes." — exact match to our build.

LOW

DONE

#17. Service row progress label added

Where to see: Clients → client detail → Overview tab → ACTIVE SERVICES row → far right.

Round 4 status: Portal showed just "50%" with no label.

Round 5 status: Each row now renders "Progress 62%" (etc.) with the word "Progress" before the percentage. Matches our build.

LOW

DONE

#18. Onboarding tab section names updated

Where to see: Clients → click any client → Onboarding tab → section pill labels.

Round 4 status: Portal: "NEEDED FROM CLIENT" / "WE TAKE CARE OF".

Round 5 status: Portal now renders "FROM CLIENT" / "FROM US". Matches our build.

HIGH

DONE

#25. Edit Services flow now uses inline transform with reorder + delete + rename

Where to see: Clients → click any client → Overview tab → ACTIVE SERVICES → click Edit.

Round 4 status: Edit opened a separate modal with Archive as the only action. No reorder, no delete, no rename.

Round 5 status: Edit now transforms the existing service list inline (no modal): each row shows up/down chevrons on the left (reorder), an Archive button + a red X delete on the right, and "Done" + "+ Add service" buttons at the top. Clicking on a service name during edit mode opens an inline rename input (confirmed working on the SEO Campaign row). Major flow gap closed.

What's left: Two refinements to land next: (1) keep status pills (ON FIRE / ON TRACK) and progress bars visible during edit so the AM keeps context — they currently disappear during edit; (2) consider consolidating Archive + Delete (the red X) into one row-level kebab so the row chrome is cleaner. Optional, but worth a pass.

MED

DONE

#28. "Details" panel (CRM Stage + Status) removed from client detail

Where to see: Clients → click any client → Overview tab → scroll the right pane.

Round 4 status: Portal rendered a "Details" panel with CRM Stage + Status (lowercase "active").

Round 5 status: Panel is no longer present anywhere on the client detail view. Status now lives only as a pill in the client detail header, which matches our build.

Partially shipped

Core work landed but refinements still needed before these are fully done.

HIGH

PARTIAL

#6. NEEDS ATTENTION section: added, but only one alert card slot

Where to see: Clients → click any client → Overview tab → block above ACTIVE SERVICES.

Round 4 status: Section was missing entirely.

Round 5 status: Section is now rendered with the right header ("NEEDS ATTENTION") and a freshness timestamp ("As of today"). Shows a single red "30 overdue tasks" card. Our build renders TWO card slots: past-due tasks AND at-risk surfaces. Portal currently shows only one slot.

What's left: Add the second card slot for at-risk surfaces. Two-card layout per our build: past-due tasks card (fire icon, "tap to open" CTA) + at-risk card (chat icon, "review soon" CTA). Each card click jumps to the offending board / service.

LOW

PARTIAL

#14. Client list row: last-activity timestamp still inconsistent

Where to see: Clients → client list rows → far right of each row.

Round 4 status: Stamp shown on some rows but not all.

Round 5 status: Still partial. Spot check: Central Innovation shows "28 Mar", Charleston's shows "16 Mar", BELLE ET BLANC shows "7 Apr" — but Bruce Rock Engineering, Bujairami, CASCADE ROAD MEDICAL, Cast Civil Group, Asset Maintenance, ATL Investments, B&E Fire Protection, BASELINE GROUP all show no timestamp. Coverage is roughly the same as round 4.

What's left: Compute and render last-activity for every client (most recent updatedAt across the client's services + tasks + notes). Format consistently: "Xd ago" for under a week, day-of-week for this week, date for older. Don't leave any row blank — if there's no activity ever, show the createdAt as a fallback.

MED

PARTIAL

#24. Service tile: star toggle works, hover actions still light

Where to see: Clients → click any client → Overview tab → ACTIVE SERVICES rows → hover and star.

Round 4 status: Star icon present, no clear hover-affordance for editing.

Round 5 status: Star icon is present on every row and toggles correctly. Edit lives at the top of the section (and the new Edit mode now handles delete + rename + reorder inline, per #25). The row itself doesn't reveal extra hover actions, but that's now less critical because Edit mode covers what was missing.

What's left: Optional: on hover, surface an open-board icon on the right rail so the AM can jump straight to the kanban without clicking through. Not blocking — the row body click already does this.

MED

PARTIAL

#27. Quick Links panel: add flow works, edit/delete not verified

Where to see: Clients → click any client → About tab → Quick Links panel.

Round 4 status: Panel rendered with empty state, full management actions not tested.

Round 5 status: "+ Add link" CTA opens an "Add Quick Link" modal with Title + URL fields and Cancel/Add buttons — confirmed. Didn't add a real link this round (no clean test data to create+delete safely), so the edit/delete actions on a saved link weren't verified.

What's left: Smoke test once: add a link, edit its label, delete it. Confirm each action behaves as expected and the link actually opens in a new tab on click. If those three work, this is fully done.

Still open

No change since round 4. These need direct attention.

MED

STILL OPEN

#9. Client list row: industry classification line still missing

Where to see: Clients → client list rows → second line under each client name.

Round 4 status: Portal showed status text ("active"/"prospect") on the second line instead of industry.

Round 5 status: Status text has been removed (good), but the industry classification line wasn't added in its place. Most rows now show just the client name with service tags below — no "SaaS / Tech" or "E-commerce / Retail" or similar scannable industry context. Half the fix landed.

What's left: Add the industry classification line directly under each client name (above the service tag chips). Drive from *client.industry*. When empty, leave the line out gracefully rather than rendering a placeholder.

MED

STILL OPEN

#12. Service rows: subtitle still shows task count, not template + due

Where to see: Clients → client detail → Overview tab → ACTIVE SERVICES list → subtitle line under each service name.

Round 4 status: Subtitle was "2/4 tasks" — raw task count, not template + next milestone.

Round 5 status: Subtitle now reads "Project · 73/117 tasks" (or "Project · 0/2 tasks"). Service type prefix was added, but the subtitle is still a task count, not the template name + next milestone date. Our build renders "Template: Brand Refresh · Due May 25" which is what an AM actually wants to scan.

What's left: Switch the subtitle line to "Template: <name> · Due <date>". Keep the progress percent on the right rail (already correct). Subtitle is for context, not status.

LOW

STILL OPEN

#15. Client name truncation: tooltip still missing

Where to see: Clients → client list rows → long client names that truncate with '...'. Hover for tooltip.

Round 4 status: Long names truncated with "..." but no hover tooltip.

Round 5 status: Verified by hovering on "CASCADE ROAD MEDICAL CENTRE PTY LTD ..." — no tooltip appears. Same as round 4.

What's left: Add a *title* attribute or tooltip with the full name on every truncating row. One line of code per row (or wrap the truncation component). Low-cost fix.

Deferred

Items where verification or work is postponed to a later pass.

MED

DEFERRED

#26. Stats tab still needs a deep field-by-field audit

Where to see: Clients → click any client → Stats tab.

Round 4 status: Tab opens, but content wasn't compared field-by-field.

Round 5 status: Stats tab is rich and live: a sync indicator ("Live · Synced 3 min ago"), 7d/30d/90d range selector, SUMMARY · ALL CHANNELS cards (Ad Spend, Leads, Blended CPL, Email Engagement) with mini sparkline charts and "vs prior 30 days" deltas, CHANNELS · 7 CONNECTED panel showing per-channel spend + status (Google Ads, Meta Ads, etc.), and a Manage integrations link. Looks well-built; not deep-audited this round.

What's left: Defer to a future Stats-only pass. Compare every KPI, chart shape, time-window behavior, drill-through, and integration tile state against our build. Out of scope for the Home/Clients/Templates push.

Fresh sweep — new observations

Items spotted in the round 5 fresh sweep that weren't in round 4.

INFO

NEW

Status indicator dot on the left of each client row

Where to see: Clients → client list → far left of each row, just before the avatar.

Round 5 status: Each row now has a small colored dot (green / blue / orange / red) on the far left. Colors appear to map to the client's health status (On Track / Onboarding / At Risk / On Fire). Calling out so it's logged — this is a good addition for at-a-glance scanning, but worth confirming the color mapping matches our build's convention exactly (especially the blue=Onboarding mapping).

What's left: Sanity-check the color mapping vs our build's status colors to make sure they line up exactly.

Build checklist

Every still-open item (including partials and new items that need work). Tick each as it ships.

- ☐ **HIGH** **#6. NEEDS ATTENTION section: added, but only one alert card slot**
 Add the second card slot for at-risk surfaces. Two-card layout per our build: past-due tasks card (fire icon, "tap to open" CTA) + at-risk card (chat icon, "review soon" CTA). Each card click jumps to the offending board / service.
- ☐ **MED** **#9. Client list row: industry classification line still missing**
 Add the industry classification line directly under each client name (above the service tag chips). Drive from *client.industry*. When empty, leave the line out gracefully rather than rendering a placeholder.
- ☐ **MED** **#12. Service rows: subtitle still shows task count, not template + due**
 Switch the subtitle line to "Template: <name> · Due <date>". Keep the progress percent on the right rail (already correct). Subtitle is for context, not status.
- ☐ **LOW** **#14. Client list row: last-activity timestamp still inconsistent**
 Compute and render last-activity for every client (most recent updatedAt across the client's services + tasks + notes). Format consistently: "Xd ago" for under a week, day-of-week for this week, date for older. Don't leave any row blank — if there's no activity ever, show the createdAt as a fallback.
- ☐ **LOW** **#15. Client name truncation: tooltip still missing**
 Add a *title* attribute or tooltip with the full name on every truncating row. One line of code per row (or wrap the truncation component). Low-cost fix.
- ☐ **MED** **#24. Service tile: star toggle works, hover actions still light**
 Optional: on hover, surface an open-board icon on the right rail so the AM can jump straight to the kanban without clicking through. Not blocking — the row body click already does this.
- ☐ **MED** **#27. Quick Links panel: add flow works, edit/delete not verified**
 Smoke test once: add a link, edit its label, delete it. Confirm each action behaves as expected and the link actually opens in a new tab on click. If those three work, this is fully done.
- ☐ **INFO** **Status indicator dot on the left of each client row**
 Sanity-check the color mapping vs our build's status colors to make sure they line up exactly.
