

## PORTAL QA · ROUND 4

# Templates page audit

May 12, 2026

Re-run of the Templates page audit. 9 findings — most carrying over from the previous Templates QA that still hadn't shipped (eyebrow active/archived split, Archived section, RESET TO DEFAULT + scrap USE TEMPLATE, kind-field free-text inline-edit, phase-subtitle migration, per-row category-chip drift), plus two fresh items from this round (brief-field defaults aren't seeded; template detail icon uses a tinted square tile instead of a single-color glyph). Triage **FROM PREVIOUS QA** chips first — those are still-open items the dev has been sitting on across multiple rounds.

---

9 findings · 0 HIGH · 6 MED · 3 LOW · 0 INFO

**Status legend:** **HIGH** blocks scanning / breaks workflow · **MED** meaningful divergence · **LOW** polish · **INFO** matches or working as intended.

Each finding carries two chips. **Severity** (HIGH / MED / LOW / INFO) maps to impact. **History tag** (**FROM PREVIOUS QA** = carried over from prior QA, **NEW** = surfaced this round) shows which items the dev has been sitting on vs. fresh observations. **FROM PREVIOUS QA** items need triage first.

## Header + left rail

---

LOW

FROM PREVIOUS QA

### Header eyebrow shows one total count; the original splits active vs archived

**Where to see:** Top → Templates → top of the left rail, above the "Templates" title.

**Portal:** "23 TEMPLATES" — a single total count rolling active and archived together.

**Original:** "6 ACTIVE · 1 ARCHIVED" — two counts separated by a middle dot. Tells the owner at a glance how many templates are in active use vs parked, without scrolling the list.

**Fix:** Split the count: "<active> ACTIVE · <archived> ARCHIVED". Omit the archived half when the count is zero so a clean workspace reads as "6 ACTIVE" rather than "6 ACTIVE · 0 ARCHIVED".

LOW

FROM PREVIOUS QA

### No "Archived" expandable section at the bottom of the template list

**Where to see:** Top → Templates → bottom of the left rail (below the active templates).

**Portal:** Active templates scroll to the bottom of the rail with no "Archived" affordance. There's no path to view, restore, or permanently delete archived templates from this surface.

**Original:** Bottom of the rail anchors a collapsed "■ ARCHIVED · <count>" row. Clicking it expands the archived list inline so the owner can scan them without navigating away. Each archived template carries an "Unarchive" action.

**Fix:** Add the collapsed Archived section + per-row Unarchive action. Pairs with the ARCHIVE button in the template header — the workflow only makes sense if archived templates have a visible home.

MED

FROM PREVIOUS QA

## Template-row category chips only partially migrated; kinds drift across the catalog

**Where to see:** Top → Templates → each row in the left rail. Scan the small chips next to each template name and look for the ones still reading "general".

**Portal:** Most templates carry a chip but it doesn't always match the work: Brand Refresh = Brand, Content = Content, Creative/Design = design, Hosting/IT = web\_dev, Organic Social Media = social — those land. Account Management, Email Marketing, Finance/Billing, HR/Resourcing all still read "general". One label ("mark edit test") is clearly leftover test data.

**Original:** Per-row chip pattern is a portal addition the original doesn't have — and that's fine, the addition is nicer for scanning the list. The issue is the chips that DO render carry wrong or placeholder values.

**Fix:** Two things:

- Migrate every built-in template to its correct kind. Account Management → "Account Management" (or whatever the workspace-curated kind catalog calls it), HR/Resourcing → "HR", etc. The "general" fallback should only land for user-created templates the owner hasn't categorised yet.
- Purge test data like "mark edit test" from the seeded kind catalog before Operations sees it.

---

## Template detail (right pane)

---

MED

FROM PREVIOUS QA

## Scrap the **USE TEMPLATE** button and restore **RESET TO DEFAULT** in its slot

**Where to see:** Top → Templates → click any built-in template → top-right of the detail header between the "Click any field to edit" pill and ARCHIVE. Try Account Management first — Brand Refresh already shows **RESET TO DEFAULT**, but Account Management has **USE TEMPLATE** in that slot.

**Portal:** Renders an **USE TEMPLATE** button in the header. Tooltip says "Apply this template's phases to a project" — vague about target, conflict handling, undo. The dev added this as a new feature; it doesn't exist on the original at all. **RESET TO DEFAULT** renders on Brand Refresh but is missing on Account Management (and likely other built-ins) — those templates can't be reverted after an accidental edit.

**Original:** Header carries **RESET TO DEFAULT** in the slot portal uses for **USE TEMPLATE**, plus **ARCHIVE**. **RESET** restores the built-in's factory state — original phases, subtasks, onboarding checklist, brief fields — wiping any edits since seed. Only renders on built-in templates; user-created templates have no factory baseline to reset to, so the button hides on those. Click triggers a confirm dialog naming exactly what gets overwritten.

**Fix:** Two-part fix:

- **Scrap the **USE TEMPLATE** button entirely.** It's the wrong function for this slot. Apply-to-a-project (if Operations wants that feature) belongs on a different surface, not the template header.
- **Render **RESET TO DEFAULT** on every built-in template's header**, not just Brand Refresh. Verify the workspace seed marks each built-in (Account Management, Web Design — Full Stack, SEO Retainer — Monthly, Content, etc.) so the button can render conditionally. Hide on user-created templates. Confirm dialog wording: "Reset <name> to its factory state? All edits since the template was seeded will be lost. This cannot be undone."

MED

FROM PREVIOUS QA

## Kind field uses a fixed-catalog dropdown; the original is free-text inline-edit

**Where to see:** Top → Templates → click any template → click the kind pill in the detail header. Test in both light and dark mode.

**Portal:** Clicking the kind pill opens a dropdown with 6 fixed options (Web Development, SEO, Content, Brand, Paid Media, Custom). This is why Account Management currently reads "Web Development" — there's no right option in the dropdown for it. The dropdown also contradicts the ↓ *Click any field to edit* hint elsewhere on the header, which promises inline-edit but this field doesn't behave that way.

**Original:** Kind is a free-text inline-editable input. Click the field → it becomes a text input pre-filled with the current value → type anything that fits the work (Account Management, HR / Resourcing, Hosting & IT, etc.) → Enter or blur saves. No fixed catalog. The icon next to kind stays as a visual cue, but the text is free-form.

**Fix:** Replace the dropdown with an inline-edit text input matching the house pattern used by every other editable field on the template detail. Click → text input → type → Enter/blur → save. Keep the icon for visual continuity but make the label free-form.

MED

NEW

## "**+ New template**" opens a required-fields modal; the original creates inline **+** drops into the editor

**Where to see:** Top → Templates → click **+ New template** in the top-right of the left rail.

**Portal:** Opens a modal titled **New template** with two required text inputs (Name + Kind) and **Cancel** / **Create** footer buttons. The user can't proceed without filling both fields upfront. Bonus regression on the Create button: it renders solid **coral/red** — the danger colour, not brand-blue — so the most additive action on the page reads as destructive.

**Original:** No modal. Clicking **+ New template** creates a blank "New template" entry immediately, selects it in the rail, and drops the user into the right-pane editor where every field is inline-editable (name, kind, phases, onboarding checklist, brief fields). Same pattern Notes uses on the client detail: click "+ New note" → blank draft appears in the list → start typing. No upfront commit, no required fields, no second click.

**Fix:** Three changes:

- **Drop the modal.** Click on **+ New template** creates a blank entry with default name "*New template*" and default kind "*general*" (or whatever the catalog fallback is), selects it, and focuses the right-pane name field for instant rename.
- **Inline-edit everything.** Same house pattern the rest of the page uses for phase names, kind, etc. No required-field gate.
- **Fix the Create button colour** if the modal stays for any reason: solid coral/red violates the four-tier blue-highlight hierarchy (coral is reserved for destructive confirms). Brand-blue *--highlight* is the right token.

MED

FROM PREVIOUS QA

## Phase subtitle template-aware migration is partial

**Where to see:** Top → Templates → click any template → detail header → line between the icon and the kind chip.

**Portal:** Brand Refresh shows a custom subtitle: *"One-time engagement, roughly 8-12 weeks."* Account Management still shows the generic placeholder *"Describe how this template's phases are paced."* Wiring exists; data hasn't been migrated across the seeded templates.

**Original:** Every built-in template ships with a custom subtitle describing pacing + engagement shape, so the operator gets useful context at a glance instead of placeholder copy.

**Fix:** Two paths:

- **Per-template subtitles** — migrate each unmigrated template (Account Management, Email Marketing, etc.) with hand-written copy.
- **Kind-driven subtitles** — derive the line from the template's kind so all templates of the same kind share a default subtitle. Lower maintenance, but less specificity per template.

Either way, eliminate the placeholder string from the live header.

MED

NEW

## Brief-field defaults aren't seeded on new templates

**Where to see:** Top → Templates → select a template → scroll to the PROJECT BRIEF FIELDS section near the bottom.

**Portal:** Section renders the title + subtitle + **+ Add field** button only. No starter chips. The Account Management template ships with zero brief fields even though brief fields are the primary way a kanban board's brief panel gets populated.

**Original:** Every built-in template seeds a sensible set of brief fields the AM can prune or extend: *Goals · Target audience · Success metrics · Competitors · Must-keep features · Out of scope · Timeline milestones* for a Web Design template; different sets per service type. The chips render in a wrapping row above the **+ Add field** button.

**Fix:** Seed each built-in template with brief-field defaults that fit its service type. The chips need to actually save to the template + flow to the kanban board's brief panel on service creation — without that, a fresh service starts with an empty brief and the AM has to recreate the same seven fields every time.

LOW

NEW

## Template-tile icon: portal uses a tinted square; the original uses a single-color glyph

**Where to see:** Top → Templates → top-left of the right pane, next to the template's title.

**Portal:** Large square tile (~56px) with a tinted background matching the template's category colour, holding a centered icon (trending-arrow for SEO, etc.). High visual weight — competes with the template title for attention.

**Original:** Smaller icon (~28px) with no background, rendered in *--text-soft*. Lives left of the title at ascender height so the title anchors the row. Visual hierarchy: title wins, icon supports.

**Fix:** Match the original — drop the tinted-tile treatment and render the icon at the smaller single-color size. The category colour can live on the chip in the left-rail list (if the chip pattern survives the decision above); the right-pane icon should stay neutral so the title is the focal point of the detail view.

---

## Build checklist

---

Every actionable finding (HIGH / MED / LOW). INFO items are listed in the body but not in the checklist. Tick each as it ships.

- ☐ **LOW** **Header eyebrow shows one total count; the original splits active vs archived**  
Split the count: "<active> ACTIVE · <archived> ARCHIVED". Omit the archived half when the count is zero so a clean workspace reads as "6 ACTIVE" rather than "6 ACTIVE · 0 ARCHIVED".
- ☐ **LOW** **No "Archived" expandable section at the bottom of the template list**  
Add the collapsed Archived section + per-row Unarchive action. Pairs with the ARCHIVE button in the template header — the workflow only makes sense if archived templates have a visible home.
- ☐ **MED** **Template-row category chips only partially migrated; kinds drift across the catalog**  
Two things:
  - Migrate every built-in template to its correct kind. Account Management → "Account Management" (or whatever the workspace-curated kind catalog calls it), HR/Resourcing → "HR", etc. The "general" fallback should only land for user-created templates the owner hasn't categorised yet.
  - Purge test data like "mark edit test" from the seeded kind catalog before Operations sees it.
- ☐ **MED** **Scrap the USE TEMPLATE button and restore RESET TO DEFAULT in its slot**  
Two-part fix:
  - **Scrap the USE TEMPLATE button entirely.** It's the wrong function for this slot. Apply-to-a-project (if Operations wants that feature) belongs on a different surface, not the template header.
  - **Render RESET TO DEFAULT on every built-in template's header**, not just Brand Refresh. Verify the workspace seed marks each built-in (Account Management, Web Design — Full Stack, SEO Retainer — Monthly, Content, etc.) so the button can render conditionally. Hide on user-created templates. Confirm dialog wording: "Reset <name> to its factory state? All edits since the template was seeded will be lost. This cannot be undone."
- ☐ **MED** **Kind field uses a fixed-catalog dropdown; the original is free-text inline-edit**  
Replace the dropdown with an inline-edit text input matching the house pattern used by every other editable field on the template detail. Click → text input → type → Enter/blur → save. Keep the icon for visual continuity but make the label free-form.

MED

**" + New template" opens a required-fields modal; the original creates inline + drops into the editor**

Three changes:

- **Drop the modal.** Click on **+ New template** creates a blank entry with default name *"New template"* and default kind *"general"* (or whatever the catalog fallback is), selects it, and focuses the right-pane name field for instant rename.
- **Inline-edit everything.** Same house pattern the rest of the page uses for phase names, kind, etc. No required-field gate.
- **Fix the Create button colour** if the modal stays for any reason: solid coral/red violates the four-tier blue-highlight hierarchy (coral is reserved for destructive confirms). Brand-blue *--highlight* is the right token.

MED

**Phase subtitle template-aware migration is partial**

Two paths:

- **Per-template subtitles** — migrate each unmigrated template (Account Management, Email Marketing, etc.) with hand-written copy.
- **Kind-driven subtitles** — derive the line from the template's kind so all templates of the same kind share a default subtitle. Lower maintenance, but less specificity per template.

Either way, eliminate the placeholder string from the live header.

MED

**Brief-field defaults aren't seeded on new templates**

Seed each built-in template with brief-field defaults that fit its service type. The chips need to actually save to the template + flow to the kanban board's brief panel on service creation — without that, a fresh service starts with an empty brief and the AM has to recreate the same seven fields every time.

LOW

**Template-tile icon: portal uses a tinted square; the original uses a single-color glyph**

Match the original — drop the tinted-tile treatment and render the icon at the smaller single-color size. The category colour can live on the chip in the left-rail list (if the chip pattern survives the decision above); the right-pane icon should stay neutral so the title is the focal point of the detail view.
