

PORTAL QA · ROUND 1

Kanban board audit

May 14, 2026

First QA pass on the kanban board surface. Surfaced after the Round 5 Home + Clients sweep — Nikko noticed the breadcrumb on the board view reads “*Clients > Client > {Service}*” with a hard-coded literal “*Client*” where the actual client name should be. Pulled the thread; the same data-wire issue breaks the card detail modal eyebrow. Sweep covers visual chrome, structural absence, and a tooltip + wiring audit across the top-right actions, breadcrumb, toolbar, columns, cards, and card detail modal. 18 findings open total: **4 HIGH, 8 MED, 6 LOW**. Highlights: breadcrumb literal + card-eyebrow data wire both broken; top-right actions row missing Board Settings + Analytics + tooltip strings on the buttons that do exist; card detail modal missing Checklist + comment input entirely; toolbar missing Labels, Due date, and Group filters; column headers Title Case + no kebab. Sorted HIGH → LOW. **All findings are NEW** — this is the first kanban-board QA round.

18 findings · 4 HIGH · 8 MED · 6 LOW · 0 INFO

Status legend: **HIGH** blocks scanning / breaks workflow · **MED** meaningful divergence · **LOW** polish · **INFO** matches or working as intended.

Each finding carries two chips. **Severity** (HIGH / MED / LOW / INFO) maps to impact. **History tag** (**FROM PREVIOUS QA** = carried over from prior QA, **NEW** = surfaced this round) shows which items the dev has been sitting on vs. fresh observations. **FROM PREVIOUS QA** items need triage first.

HIGH severity

HIGH

NEW

Breadcrumb middle crumb hard-codes the literal “Client” instead of rendering the actual client name

Where to see: Top → Clients → click any client → Overview tab → click any service card → look at the breadcrumb on the board page.

Portal: Breadcrumb reads “*Clients > Client > Content writing for Meta Ads*”. The middle crumb is a hard-coded literal “*Client*” — same string for every board, every service, every client. User has no idea which client this board belongs to from the breadcrumb alone. The crumb is also clickable but its href points at */clients* generically rather than the specific client detail page.

Original: Breadcrumb reads “*Clients > Acme Corporation > Brand Refresh Q2*”. Middle crumb is the real *Client.name*, linked to *#clients/{slug}* (the client detail page). Last crumb is the service name (here Brand Refresh Q2), with click-to-rename affordance (*aria-current=“page”* + title “*Click to rename*”).

Fix: Two fixes on the same root cause:

- **Wire the middle crumb to *service.client.name*** instead of the hard-coded “*Client*” string. The board route already knows the service ID; the service has a client reference; the name comes from there.

- **Wire the href to the client detail page (*/clients/{client.slug}*)** so clicking the crumb takes the user back to the right client, not the generic list.

Same data wire fixes the card detail modal eyebrow (HIGH #2).

HIGH

NEW

Card detail modal eyebrow is missing the client name prefix (same root cause as the breadcrumb)

Where to see: Top → Clients → click any client → Overview → service card → open any card → look at the small eyebrow above the card title in the modal.

Portal: Eyebrow renders “CONTENT WRITING FOR META ADS” — just the service name in uppercase. No client name. Same missing wire that breaks the breadcrumb.

Original: Eyebrow renders “ACME CORPORATION · BRAND REFRESH Q2” — client name + middle dot + service name. Tells the user which client this card belongs to without having to look at the breadcrumb.

Fix: Update the card-detail modal eyebrow formatter:

```
{client.name.toUpperCase()} · {service.name.toUpperCase()}.
```

Same data source as the breadcrumb fix above. Confirm the modal component receives the client reference (it should — the card belongs to a service which belongs to a client).

HIGH

NEW

Board actions area is missing Board Settings + Analytics buttons; star + Due date controls are misplaced inline with the breadcrumb

Where to see: Top → board view → top-right of the page, right of the breadcrumb, and on the breadcrumb row itself.

Portal: Top-right shows only:

- *Project Brief* button.
- *1 member* chip with avatar (the only member assigned to the board).

Star (favourite) + “+ Due date” pill are rendered **inline next to the breadcrumb**, on the left side. Star is the outline (unfavourited) variant; “+ Due date” is a creation affordance.

Original: Top-right shows the full board-actions row:

- **Star button** (gold-filled when favourited).
- *Project Brief* button.
- **Board Settings button** (opens settings popover: Edit service details / Archived cards / Delete service).
- *Members 2* chip with avatar stack.
- **Analytics button** (opens the per-board analytics view).

No “+ Due date” pill anywhere — service due dates live in the board settings popover, not the breadcrumb area.

Fix: Two parts:

- **Move the star button to the top-right actions area** alongside Project Brief. Drop the “+ Due date” inline pill next to the breadcrumb; the due date is part of the service config, edited from Board Settings.
- **Add Board Settings + Analytics buttons** to the actions row. Board Settings opens a popover with Edit service details, Archived cards, Delete service. Analytics opens the service-specific analytics page (same atom the client-level Analytics page uses, filtered to this service).

HIGH

NEW

Card detail modal is missing the Checklist section and the comment input box

Where to see: Top → board view → click any card → open the detail modal → scroll the left pane (Description down) and the right pane (Comments tab).

Portal: Two whole pieces of the card model are absent:

- **No Checklist section** in the left pane. After Description there's just the "Created ... Due ..." footer. Cards have no place to capture subtasks.
- **No comment input box** in the Comments tab on the right pane. The tab renders any existing comments but offers no way to add a new one. Comments are effectively read-only on the portal.

Original: Both present and wired:

- **Checklist** renders under Description with "+ Add Task" affordance. Each task is a checkbox + label, drag-handleable, with strike-through on complete.
- **Comment input** is a textarea pinned to the bottom of the Comments tab with placeholder "Write a comment... (■/Ctrl+Enter to send)" + a Send button. Existing comments render above; new comments append on submit.

Fix: Implement both sections per the original:

- **Checklist:** array of $\{id, label, complete\}$ per card. Render under Description. + Add Task creates a new empty checkbox that auto-focuses for inline rename (same pattern as the templates + Add phase fix from the Templates QA).
- **Comment input:** textarea pinned bottom of the right pane when Comments tab is active. Cmd/Ctrl+Enter to send. Send button to the right. Existing comments render above as a scrollable list.

MED severity

MED

NEW

Toolbar filter set is incomplete — missing Labels, Due date, and Group filters

Where to see: Top → board view → filter toolbar row (between breadcrumb and columns). Count and label each control.

Portal: Four controls only:

- Search tasks... input.
- All Priorities dropdown.
- All Assignees dropdown.
- Sort: Manual dropdown.

Plus a “57 tasks” total count right-aligned.

Original: Seven controls:

- Search cards... input + **■F** keyboard hint pill inside the field.
- Assignee dropdown.
- Labels dropdown.
- Priority dropdown.
- Due date dropdown.
- Group: None dropdown (right side).
- Sort: Manual dropdown (right side).

No total-count badge — per-column counts carry the totals.

Fix: Add the three missing controls:

- **Labels filter** — multi-select dropdown of labels attached to any card on the board.
 - **Due date filter** — dropdown with presets (Today, This week, Overdue, No date, Custom range).
 - **Group: dropdown** — options None / Assignee / Priority / Label. Defaults to None.
- Also add the **■F** shortcut hint inside the search input. Drop the “57 tasks” total badge; the column counts cover it.

MED

NEW

Column headers use Title Case + no kebab menu; should be UPPERCASE + per-column actions kebab

Where to see: Top → board view → look at the header of each kanban column (To Do, In Progress, Blocked, Needs Review, Done).

Portal: Header reads “To Do”, “In Progress”, “Blocked”, “Needs Review”, “Done” — Title Case. Each header has a coloured dot + label + count. **No kebab** on the right of the header — no per-column actions.

Original: Header reads “TO DO”, “IN PROGRESS”, “BLOCKED”, “NEEDS REVIEW”, “DONE” — UPPERCASE eyebrow style. Each header has coloured dot + label + count + **kebab** (■) on the right with *aria-label*=“Column options”. Kebab opens column actions (rename, change colour, archive all, clear column).

Fix: Two changes per column header:

- **Uppercase the labels** (or apply *text-transform: uppercase* + tighter letter-spacing on the existing label).
- **Add a kebab button** (aria-label “Column options”) on the right edge of each header. Wire to a popover with the standard column actions: Rename, Change colour, Archive all cards, Clear column.

MED

NEW

Card chrome differs — original shows a due-date pill at the top of every dated card; portal shows only conditional status badges

Where to see: Top → board view → look at the top edge of each card in TO DO and DONE columns.

Portal: Cards render **only conditional status badges** at the top, and only when there's an exception state:

- *Overdue 3d* (red).
- *Blocked · 2d* (red dot).
- *Today* (orange) — for cards due today.

Cards without an exception state have **no date affordance at all** at the card chrome level. User can't see when a TO DO card is due without clicking into it.

Original: Cards in TO DO + DONE render a **due-date pill at top-left** (*May 19, May 30, Apr 22 ✓*). When a card has an exception state it overrides the date pill with the status badge instead (*Overdue 2d, Blocked · 17d*). Cards without a date render no top pill, but most cards have a date.

Also: DONE cards strike-through the title text + render a check (✓) icon in the date pill. Portal DONE column is empty so this couldn't be verified end-to-end, but the strike-through behaviour isn't visible on portal.

Fix: Two pieces:

- **Render the due date as a top-left pill on every dated card** when no exception state applies. Pill carries the date (short format: *Mmm DD*) + a calendar icon prefix. Status badges (*Overdue / Blocked / Today*) take precedence and replace the date pill when active.
- **Add the DONE-state treatment:** strike-through on the title text + check icon (✓) in the date pill + slightly muted card opacity. Cards in DONE should read as completed at a glance.

MED

NEW

Card chrome missing the comment-count badge

Where to see: Top → board view → look at the bottom-left of a card that has comments (open any card, leave a comment, close, scan the card).

Portal: Cards with comments render no comment-count indicator on the card chrome. User has to open the card to find out a discussion exists. Discoverability gap.

Original: Cards with comments render a small ■ *N* badge bottom-left (next to the recurring icon if present). Example: Moodboard directions — round 1 shows ■ 1 to indicate one comment exists. Tells the user the card has discussion before they open it.

Fix: Add a comment-count badge to the card chrome:

- Render only when *card.comments.length* > 0.
- Speech-bubble icon + count number.
- Position bottom-left, next to any other card-chrome indicators (recurring icon, label dots).
- Same atom can be reused for checklist progress (e.g. ■ 2/5) once the Checklist HIGH item lands.

MED

NEW

Card detail modal — Assignees and Effort render as empty placeholders even when the card has values

Where to see: Top → board view → open any card → look at the Assignees + Effort fields in the left pane.

Portal: **Assignees** renders as just a single + button — no avatar chip even when the card has an assignee on the board (the avatar IS visible on the card chrome at bottom-right). Modal isn't reading the `assigneeIds` field.

Effort renders as a dash placeholder (—) followed by *slots ESTIMATED*. Same pattern — when the card has an effort value, the modal still shows the dash. Field isn't reading from the card.

Both are wiring bugs rather than missing implementations — the data is there, the modal isn't reading it.

Original: Both fields render the actual values:

- **Assignees** shows the NT Nikko Trinidad chip (avatar + name on a purple pill). + button next to it for adding more.
- **Effort** shows the number (1) in a small input + *slot ESTIMATED* label. Reads/writes the value, not a placeholder.

Fix: Wire both fields to the underlying card data:

- **Assignees:** bind to `card.assigneeIds`, map each to a user chip. Same chip atom the Members page uses. + button adds more.
- **Effort:** bind input value to `card.effort`. If null, show empty + the — placeholder. If set, show the number. The “slot/slots ESTIMATED” suffix stays.

MED

NEW

Top-right board action buttons missing tooltips that the original sets

Where to see: Top → board view → hover each button in the top-right actions row (star, Project Brief, “+ Due date”, Members chip). Inspect *title* + *aria-label* on each.

Portal: Mixed coverage:

- **Star** → *title*="Pin to My Boards", *aria-label*="Pin to My Boards". Generic — doesn't say WHICH board.
- **Project Brief** → no *title*, no *aria-label*. Screen-reader users hear only the visible text.
- **+ Due date** → no *title*, no *aria-label*. Also unlabeled.
- **Members chip** → the 1-member chip carries no tooltip either.

Original: Every top-right action has both *title* and a more descriptive *aria-label* that includes the board context:

- **Star** → *title*="Unpin from My Boards", *aria-label*="Unpin Brand Refresh Q2 from My Boards" (board name in the aria).
- **Project Brief** → *title*="Open the project brief".
- **Members 2** → *title*="2 on this client's team".
- **Analytics** → *title*="Analytics filtered to Brand Refresh Q2" (board name in the title).

Fix: Set *title* + *aria-label* on each action button, using the original's exact strings:

- **Star:** "Pin {board.name} to My Boards" / "Unpin {board.name} from My Boards". Include the board name.
- **Project Brief:** "Open the project brief".
- **Members chip:** "{N} on this client's team".
- Once **Board Settings + Analytics** ship (HIGH #3 above), include "Analytics filtered to {board.name}" for parity.

MED

NEW

Breadcrumb last crumb missing the click-to-rename affordance

Where to see: Top → board view → hover the last breadcrumb crumb (the service name).

Portal: Last crumb renders as plain text — no *title*, no *role="button"*, no *aria-current*, no click handler. Can't be edited inline. To rename the service the user has to find some other entry point (the missing Board Settings → Edit service details menu, when it ships).

Original: Last crumb wraps in a `<span class="breadcrumb-rename" aria-current="page" role="button" tabindex="0" title="Click to rename">`. Clicking it switches the crumb to an inline input pre-populated with the service name. Enter to commit, Escape to cancel. The breadcrumb itself is the rename affordance — no separate menu needed.

Fix: Make the last crumb a click-to-rename target:

- Add *role="button"*, *tabindex="0"*, *aria-current="page"*, *title="Click to rename"*.
- On click, replace the span with an inline input bound to *service.name*. Same inline-rename atom used on the Client hero + Notes title.
- Enter commits, Escape cancels.

Cheap fix; gives the user a fast path to rename the service that doesn't depend on the Board Settings menu landing first.

MED

NEW

Card detail modal — Activity tab uses count badge format (“Activity 3”); original uses “Activity Log” with no count

Where to see: Top → board view → open any card → look at the right-pane tabs (Comments / Activity).

Portal: Tab label reads “Activity” + a small count badge (“3”). Implies the count is unread or notable activity, but the badge is just a total count and doesn't indicate read state.

Original: Tab label reads “Activity Log” — full label, no count. Frames the tab as a chronological log to browse, not as a notifications counter.

Fix: Rename the tab label from “Activity” to “Activity Log” and remove the count badge. If unread state matters, surface it as a dot indicator (no number) rather than a count — same pattern as the bell-icon notification indicator in the top nav.

LOW severity

LOW

NEW

Toolbar wording uses “tasks”; rest of the app (and the original) uses “cards”

Where to see: Top → board view → search input placeholder + the right-aligned count badge on the portal.

Portal: Search placeholder reads “*Search tasks...*”. Right-aligned count badge reads “57 tasks”. The card detail modal also uses “task” in its activity strings (“*Updated task: N/A — not applicable...*”, “*Changed task from todo to blocked*”).

Original: All references are to “cards”:

- Search placeholder: “*Search cards...*”.
- Column counts are bare numbers (the unit is implied by the surface being a board).
- Activity log strings: “Moved card from To Do to Blocked”, “Renamed card to ...”.

Consistent with “Add Card”, “Create card”, “Open card” elsewhere in the app.

Fix: Search and replace the “task” vocabulary on the board surface with “card”:

- Search placeholder → “*Search cards...*”.
- Activity strings → “*card*” instead of “*task*”.
- If the “57 tasks” total badge stays after the MED finding above, change to “57 cards”; otherwise remove the badge entirely.

“Task” is reserved for the Home MY TASKS section and the inside-a-card checklist items (subtasks). On the board, the unit is a card.

LOW

NEW

Empty-column copy reads “No tasks”; original reads “No cards yet — drag one in from another list.”

Where to see: Top → board view → any column with zero cards (Done on portal, Needs Review on original).

Portal: Empty state renders “*No tasks*” centred in the column body. No instruction, no affordance.

Original: Empty state renders “*No cards yet — drag one in from another list.*” Centred, two lines, instructional copy. Tells the user the column accepts drops and how to populate it.

Fix: Replace the empty-state string with the original's longer instructional copy. Same “card” vocabulary fix as the previous finding.

LOW

NEW

Card detail modal — date format uses Australian (12 May 2026); rest of the app uses American (May 12, 2026)

Where to see: Top → board view → open any card → look at the “Created ... · Due ...” footer at the bottom of the left pane, and the Activity tab timestamps on the right.

Portal: Renders “Created 12 May 2026 · Due 15 May 2026” in the card footer. Activity log timestamps render as “14 May 2026, 9:12 am”. Day-month-year order, lowercase *am/pm*.

Original: Renders “Created Apr 27, 2026 · Due May 6, 2026” in the card footer. Comment timestamps render as “May 3, 1:00 pm”. Month-day-year order, lowercase *pm* (with the same lowercase quirk on the comment timestamps; the AM/PM uppercase uses on the Notes editor only).

Same finding pattern as the Notes editor timestamp (Clients R5 LOW).

Fix: Swap the card-modal date formatter to use the shared *formatTimestamp()* helper (or add one if it doesn't exist). Match the rest of the app's *Intl.DateTimeFormat* tokens: *{month: 'short', day: 'numeric', year: 'numeric'}* for the footer; add hour + minute for activity-log timestamps. The fix is the same atom that's needed for the Notes editor timestamp issue.

LOW

NEW

Search input on the board toolbar missing aria-label and **⌘**F keyboard-shortcut hint

Where to see: Top → board view → toolbar row → search input on the left.

Portal: `<input placeholder="Search tasks...">` with no *aria-label*, no *title*, no inline keyboard-shortcut hint. Screen-reader users hear only the placeholder; keyboard users have no way to discover the shortcut (if one even exists — couldn't verify without testing key bindings).

Original: `<input placeholder="Search cards...">` with a *aria-label="Search cards on this board"* and an inline **⌘**F pill rendered inside the field on the right side. Hint tells the user the shortcut without adding a tooltip; screen-reader gets the longer label.

(Same audit Nikko's previous QA work flagged for the Clients list search; pattern should be consistent app-wide.)

Fix: Two pieces:

- **aria-label:** set to *"Search cards on this board"* (or *"Search cards..."* at minimum) so screen-reader users get context the placeholder doesn't deliver.
- **Inline **⌘**F pill:** render a small keyboard-shortcut hint inside the right edge of the input. Bind **⌘**F (Mac) / Ctrl+F (Win) at the document level so pressing the shortcut focuses the input. Same atom the global topnav search uses with **⌘**K.

LOW

NEW

"Add a card" affordance copy and glyph drift

Where to see: Top → board view → bottom of the TO DO column → the only "+ Add card" button on the surface (per the existing rule that + Add Card lives in TO DO only).

Portal: Renders "+ Add a card" with a standard ASCII + sign.

Original: Renders "**+** Add Card" with a full-width plus sign and Title Case "Card" (no "a" article). Same pattern as "**+** Add phase" on Templates and "**+** New note" on Notes — Title Case noun, no article, full-width plus.

Fix: Two single-character changes:

- Copy: "+ Add a card" → "+ Add Card" (drop the "a", capitalise Card).
- Glyph: switch the ASCII + to the full-width **+** the rest of the app uses for create-affordances (keeps visual rhythm with the other + buttons).

LOW

NEW

Card detail modal — Share button missing from the modal header

Where to see: Top → board view → open any card → look at the top-right of the modal header (the icon row before the × close button).

Portal: Header icon row shows: bookmark icon + kebab (...) + × close. Three controls.

Original: Header icon row shows: bookmark icon + **share icon** + kebab (...) + × close. Four controls. Share opens a popover with “Copy link to this card” + “Email this card”.

Fix: Add a share button between the bookmark and the kebab. Wire to a small popover with two actions:

- **Copy link** — copies the canonical card URL to the clipboard (e.g. `/board/{id}?card={cardId}`).
- **Email card** — opens a mailto: link with the card title as subject + link in the body.

Build checklist

Every actionable finding (HIGH / MED / LOW). INFO items are listed in the body but not in the checklist. Tick each as it ships.

- ☐ **HIGH** **Breadcrumb middle crumb hard-codes the literal “Client” instead of rendering the actual client name**
Two fixes on the same root cause:
 - **Wire the middle crumb to `service.client.name`** instead of the hard-coded “Client” string. The board route already knows the service ID; the service has a client reference; the name comes from there.
 - **Wire the href to the client detail page (`/clients/{client.slug}`)** so clicking the crumb takes the user back to the right client, not the generic list.Same data wire fixes the card detail modal eyebrow (HIGH #2).
- ☐ **HIGH** **Card detail modal eyebrow is missing the client name prefix (same root cause as the breadcrumb)**
Update the card-detail modal eyebrow formatter:
`{client.name.toUpperCase()} · {service.name.toUpperCase()}.`
Same data source as the breadcrumb fix above. Confirm the modal component receives the client reference (it should — the card belongs to a service which belongs to a client).
- ☐ **HIGH** **Board actions area is missing Board Settings + Analytics buttons; star + Due date controls are misplaced inline with the breadcrumb**
Two parts:
 - **Move the star button to the top-right actions area** alongside Project Brief.Drop the “+ Due date” inline pill next to the breadcrumb; the due date is part of the service config, edited from Board Settings.
 - **Add Board Settings + Analytics buttons** to the actions row. Board Settings opens a popover with Edit service details, Archived cards, Delete service. Analytics opens the service-specific analytics page (same atom the client-level Analytics page uses, filtered to this service).
- ☐ **HIGH** **Card detail modal is missing the Checklist section and the comment input box**
Implement both sections per the original:
 - **Checklist:** array of `{id, label, complete}` per card. Render under Description. + Add Task creates a new empty checkbox that auto-focuses for inline rename (same pattern as the templates + Add phase fix from the Templates QA).
 - **Comment input:** textarea pinned bottom of the right pane when Comments tab is active. Cmd/Ctrl+Enter to send. Send button to the right. Existing comments render above as a scrollable list.

- ☐ **MED** **Toolbar filter set is incomplete — missing Labels, Due date, and Group filters**
Add the three missing controls:
 - **Labels filter** — multi-select dropdown of labels attached to any card on the board.
 - **Due date filter** — dropdown with presets (Today, This week, Overdue, No date, Custom range).
 - **Group: dropdown** — options None / Assignee / Priority / Label. Defaults to None.Also add the **■F** shortcut hint inside the search input. Drop the “57 tasks” total badge; the column counts cover it.
- ☐ **MED** **Column headers use Title Case + no kebab menu; should be UPPERCASE + per-column actions kebab**
Two changes per column header:
 - **Uppercase the labels** (or apply *text-transform: uppercase* + tighter letter-spacing on the existing label).
 - **Add a kebab button** (aria-label “Column options”) on the right edge of each header. Wire to a popover with the standard column actions: Rename, Change colour, Archive all cards, Clear column.
- ☐ **MED** **Card chrome differs — original shows a due-date pill at the top of every dated card; portal shows only conditional status badges**
Two pieces:
 - **Render the due date as a top-left pill on every dated card** when no exception state applies. Pill carries the date (short format: *Mmm DD*) + a calendar icon prefix. Status badges (Overdue / Blocked / Today) take precedence and replace the date pill when active.
 - **Add the DONE-state treatment:** strike-through on the title text + check icon (✓) in the date pill + slightly muted card opacity. Cards in DONE should read as completed at a glance.
- ☐ **MED** **Card chrome missing the comment-count badge**
Add a comment-count badge to the card chrome:
 - Render only when *card.comments.length > 0*.
 - Speech-bubble icon + count number.
 - Position bottom-left, next to any other card-chrome indicators (recurring icon, label dots).
 - Same atom can be reused for checklist progress (e.g. **■ 2/5**) once the Checklist HIGH item lands.
- ☐ **MED** **Card detail modal — Assignees and Effort render as empty placeholders even when the card has values**
Wire both fields to the underlying card data:
 - **Assignees:** bind to *card.assigneeIds*, map each to a user chip. Same chip atom the Members page uses. + button adds more.
 - **Effort:** bind input value to *card.effort*. If null, show empty + the — placeholder. If set, show the number. The “slot/slots ESTIMATED” suffix stays.

- ☐

MED

Top-right board action buttons missing tooltips that the original sets
 Set *title* + *aria-label* on each action button, using the original's exact strings:

 - **Star**: “Pin {board.name} to My Boards” / “Unpin {board.name} from My Boards”. Include the board name.
 - **Project Brief**: “Open the project brief”.
 - **Members chip**: “{N} on this client's team”.
 - Once **Board Settings + Analytics** ship (HIGH #3 above), include “Analytics filtered to {board.name}” for parity.
- ☐

MED

Breadcrumb last crumb missing the click-to-rename affordance
 Make the last crumb a click-to-rename target:

 - Add *role*=“button”, *tabindex*=“0”, *aria-current*=“page”, *title*=“Click to rename”.
 - On click, replace the span with an inline input bound to *service.name*. Same inline-rename atom used on the Client hero + Notes title.
 - Enter commits, Escape cancels.

Cheap fix; gives the user a fast path to rename the service that doesn't depend on the Board Settings menu landing first.
- ☐

MED

Card detail modal — Activity tab uses count badge format (“Activity 3”); original uses “Activity Log” with no count
 Rename the tab label from “Activity” to “Activity Log” and remove the count badge. If unread state matters, surface it as a dot indicator (no number) rather than a count — same pattern as the bell-icon notification indicator in the top nav.
- ☐

LOW

Toolbar wording uses “tasks”; rest of the app (and the original) uses “cards”
 Search and replace the “task” vocabulary on the board surface with “card”:

 - Search placeholder → “Search cards...”.
 - Activity strings → “card” instead of “task”.
 - If the “57 tasks” total badge stays after the MED finding above, change to “57 cards”; otherwise remove the badge entirely.

“Task” is reserved for the Home MY TASKS section and the inside-a-card checklist items (subtasks). On the board, the unit is a card.
- ☐

LOW

Empty-column copy reads “No tasks”; original reads “No cards yet — drag one in from another list.”
 Replace the empty-state string with the original's longer instructional copy. Same “card” vocabulary fix as the previous finding.
- ☐

LOW

Card detail modal — date format uses Australian (12 May 2026); rest of the app uses American (May 12, 2026)
 Swap the card-modal date formatter to use the shared *formatTimestamp()* helper (or add one if it doesn't exist). Match the rest of the app's *Intl.DateTimeFormat* tokens: *{month: 'short', day: 'numeric', year: 'numeric'}* for the footer; add hour + minute for activity-log timestamps. The fix is the same atom that's needed for the Notes editor timestamp issue.

LOW

Search input on the board toolbar missing aria-label and keyboard-shortcut hint

Two pieces:

- **aria-label**: set to “Search cards on this board” (or “Search cards...” at minimum) so screen-reader users get context the placeholder doesn't deliver.
- **Inline  pill**: render a small keyboard-shortcut hint inside the right edge of the input. Bind  (Mac) / Ctrl+F (Win) at the document level so pressing the shortcut focuses the input. Same atom the global topnav search uses with .

LOW

“Add a card” affordance copy and glyph drift

Two single-character changes:

- **Copy**: “+ Add a card” → “+ Add Card” (drop the “a”, capitalise Card).
- **Glyph**: switch the ASCII + to the full-width  the rest of the app uses for create-affordances (keeps visual rhythm with the other + buttons).

LOW

Card detail modal — Share button missing from the modal header

Add a share button between the bookmark and the kebab. Wire to a small popover with two actions:

- **Copy link** — copies the canonical card URL to the clipboard (e.g. `/board/{id}?card={cardId}`).
- **Email card** — opens a mailto: link with the card title as subject + link in the body.
