

## PORTAL QA · ROUND 1

# Workflow 5 · Notifications + deep-link audit

May 15, 2026

**Workflow 5 of 10** in the May 15 deep-testing pass. Tested the notifications bell + deep-link routing on the portal: opened the bell panel, inspected the notification types rendered, clicked an overdue-task notification to verify it navigates to the right surface.

**One HIGH** open: the notification click handler produces a malformed URL with double `/projects-v2/` prefix, AND even with a clean URL the deep-link target (the specific card on the specific board) isn't reached. The page lands on Home instead. Breaks the entire "alert me + take me there" flow — users see notifications but clicking them doesn't help them act.

Bell panel itself renders correctly (6 notification types visible, all with proper icons + subtitles + unread dots, plus a "Mark all read" link). The UI works; the navigation is the problem.

2 findings: 1 HIGH + 1 INFO.

---

2 findings · 1 HIGH · 0 MED · 0 LOW · 1 INFO

**Status legend:** **HIGH** blocks scanning / breaks workflow · **MED** meaningful divergence · **LOW** polish · **INFO** matches or working as intended.

Each finding carries two chips. **Severity** (HIGH / MED / LOW / INFO) maps to impact. **History tag** (**FROM PREVIOUS QA** = carried over from prior QA, **NEW** = surfaced this round) shows which items the dev has been sitting on vs. fresh observations. **FROM PREVIOUS QA** items need triage first.

## Functional · HIGH severity

---

**HIGH****NEW**

### Notification click produces a malformed URL with double `/projects-v2/` prefix; deep-link does not reach the intended target

**Where to see:** Top → bell icon (top-right of the top nav) → click any overdue-task notification (e.g. "Review prospect's website copy & messaging — 4d overdue · Acme Corp").

**Portal:** Click takes the user to URL

`/projects-v2/projects-v2/board/b1ea98a9-9d34-4a79-9693-d652569aec83` — the `/projects-v2/` prefix appears twice. The page that renders is **Home**, not the intended board/card surface. The deep-link navigation is doubly broken: the URL concatenation is wrong, and even if the URL were correct the destination doesn't get rendered.

Verified with the first overdue-task notification on the bell panel. Same behaviour expected for all notification types (overdue / blocked / critical client / daily summary / time-off pending / time-off decided).

**Original:** Notification href is `#board/<serviceId>/card/<cardId>` (or `#clients/<clientId>` for client-level notifications). Click navigates to the exact card/board, scrolls it into view, and applies a 1.6-second focus-pulse ring so the user sees what the notification was pointing at.

**Fix:** Two pieces:

- **Fix the URL builder.** The notification onClick handler appears to be concatenating the route base (`/projects-v2`) on top of an already-prefixed link. Strip the duplicate. Confirm with DevTools by hovering a notification — the href should be a single `/projects-v2/board/<id>` path, not doubled.

- **Fix the deep-link routing.** Even with a clean URL, the route handler must read the `card` param + scroll the card into view inside the board page. Add the focus-pulse ring (1.6 seconds) so the user can see which card the notification pointed at.

---

## Functional · INFO severity (verified working)

---

INFO

NEW

**Verified working: bell panel renders multiple notification types correctly**

**Where to see:** Top → bell icon. Inspect the panel contents.

**Portal:** Panel renders six visible notifications at the moment of inspection:

- Overdue task (4d overdue, Acme Corp) with status dot.
- Overdue task (2d overdue, Acme Corp).
- Critical client "121 Group (Internal)" — 3 critical.
- Blocked work "GLICKS FURNITURE" — 1 blocked.
- Critical client "Central Innovation" — 122 overdue, 4 critical.
- Daily Summary — 2 overdue.

Each row has icon + title + subtitle + read/unread dot indicator. "Mark all read" link in the top-right of the panel.

**Original:** Same shape.

**Fix: None.** The panel UI works; the click handler is the issue (HIGH above).

---

## Build checklist

---

Every actionable finding (HIGH / MED / LOW). INFO items are listed in the body but not in the checklist. Tick each as it ships.

**HIGH****Notification click produces a malformed URL with double "/projects-v2/" prefix; deep-link does not reach the intended target**

Two pieces:

- **Fix the URL builder.** The notification onClick handler appears to be concatenating the route base (*/projects-v2*) on top of an already-prefixed link. Strip the duplicate. Confirm with DevTools by hovering a notification — the href should be a single */projects-v2/board/<id>* path, not doubled.
- **Fix the deep-link routing.** Even with a clean URL, the route handler must read the *card* param + scroll the card into view inside the board page. Add the focus-pulse ring (1.6 seconds) so the user can see which card the notification pointed at.
