

PORTAL QA · ROUND 1

Workflow 6 · Command Palette audit

May 15, 2026

Workflow 6 of 10 in the May 15 deep-testing pass. Tested the Command Palette on the portal: pressed **■K** to open, inspected the empty-state command list, typed "Acme" to verify entity search.

One HIGH open: the palette ships the command list correctly but fails to search any other entity type. Typing a real client name returns "No matches". The placeholder advertises *"Search clients, tasks, people, or commands..."* — three of those four sources aren't actually wired.

The shell + command path works (verified via INFO). This is a wiring gap, not a missing-feature gap. The fix likely lives in the palette component's data-source setup.

2 findings: 1 HIGH + 1 INFO.

2 findings · 1 HIGH · 0 MED · 0 LOW · 1 INFO

Status legend: **HIGH** blocks scanning / breaks workflow · **MED** meaningful divergence · **LOW** polish · **INFO** matches or working as intended.

Each finding carries two chips. **Severity** (HIGH / MED / LOW / INFO) maps to impact. **History tag** (**FROM PREVIOUS QA** = carried over from prior QA, **NEW** = surfaced this round) shows which items the dev has been sitting on vs. fresh observations. **FROM PREVIOUS QA** items

need triage first.

NEW

Command Palette search returns "No matches" for client names even though those clients exist in the workspace

Where to see: Press **⌘K** to open the Command Palette → type "Acme" (a client that exists).

Portal: Palette renders the placeholder "Search clients, tasks, people, or commands..." which advertises four entity types. Typing *Acme* returns: **NO RESULTS / No matches for "Acme". Try a client name, a task, or a command like Go to Analytics.**

But the workspace has at least two Acme clients: *Acme Corp* and *Acme 2*. Search isn't indexing clients (or tasks or people) — only commands appear to work. Either the search index is empty / not built at all, or the matcher is filtering out non-command entities silently.

Breaks the main use-case of the palette: jump-to-client / jump-to-card. The bar might as well be a route picker.

Original: **⌘K** opens, typing matches across clients, tasks, members, and commands. Results group by entity type (CLIENTS, TASKS, MEMBERS, COMMANDS) so the user can see what kind of result each row is. Fuzzy match, so *acm* finds *Acme Corp*; *nks* finds *Nikko Trinidad*; *refresh* finds *Brand Refresh Q2*.

Fix: Wire the palette search to the actual entity indexes. Likely the dev built only the command-list path and didn't connect the client/task/people sources. In the palette component:

- **Build a flat index** with each entry shaped `{kind: 'client'|'task'|'member'|'command', id, label, subtitle, href}`.
- **Filter by typed query across the label + subtitle** (case-insensitive substring match minimum; fuzzy match if cheap).
- **Group by kind** in the rendered list with section headers (CLIENTS, TASKS, MEMBERS, COMMANDS).
- **Click navigates** to the href and closes the palette.

Reference: *FlizowCommandPalette.tsx* on the source build. Confirm whether the data sources are wired.

Functional · INFO severity (verified working)

INFO

NEW

Verified working: ■K shortcut opens the Command Palette + commands render

Where to see: Press ■K from anywhere on the portal.

Portal: Palette opens with focus on the input (placeholder reads "Search clients, tasks, people, or commands..."), ESC label visible on the right. COMMANDS section shows six routes: Go to Home, Go to Clients, Go to Ops, Go to Analytics, Go to Weekly WIP, Go to Templates. Each row has a small icon + title + subtitle.

Original: Same.

Fix: None. Shell + command path works.

Build checklist

Every actionable finding (HIGH / MED / LOW). INFO items are listed in the body but not in the checklist. Tick each as it ships.
