

PORTAL QA · ROUND 2

Account settings audit

May 13, 2026

Round 2 audit of the Account Settings modal. The first pass was the round-4 deep file (since retired) which flagged 9 items across the visible sections. Live re-sweep across all 10 sidebar surfaces (Profile, Preferences, Notifications, Time off, Workspace, Members, Job titles, Holidays, Trash, Sign-in) — 2 of the original 9 shipped (theme toggle in the avatar dropdown + Trash retention now 90 days). The remaining 7 stayed open, joined by a substantial set of fresh divergences — most notably the entire Phase 8 time-off entitlement surface, the Members admin controls, the Holidays sync + portability, and "Sign out everywhere." 15 findings sorted HIGH → LOW. Triage **FROM PREVIOUS QA** chips first.

15 findings · 4 HIGH · 5 MED · 5 LOW · 1 INFO

Status legend: **HIGH** blocks scanning / breaks workflow · **MED** meaningful divergence · **LOW** polish · **INFO** matches or working as intended.

Each finding carries two chips. **Severity** (HIGH / MED / LOW / INFO) maps to impact. **History tag** (**FROM PREVIOUS QA** = carried over from prior QA, **NEW** = surfaced this round) shows which items the dev has been sitting on vs. fresh observations. **FROM PREVIOUS QA** items need triage first.

HIGH severity

HIGH**FROM PREVIOUS QA**

Sidebar missing "Workspace" section entirely — owners can't set workspace identity (name, initials, colour, logo)

Where to see: Avatar → Account settings → left rail. Compare the WORKSPACE group on both builds.

Portal: WORKSPACE group has 4 items: Members / Job titles / Holidays / Trash. **No "Workspace" section.** Owners can't edit workspace name, initials, brand colour, or logo from settings.

Original: WORKSPACE group has 5 items: **Workspace** / Members / Job titles / Holidays / Trash. The Workspace section holds the workspace identity fields: name, two-letter initials, brand colour, logo upload (with preview + remove), creation date.

Fix: Add the Workspace sidebar section as the first item in the WORKSPACE group. Fields: workspace name, initials (2-letter abbreviation), colour picker, logo upload (preview + remove), creation date. Owner + Admin write access.

HIGH

NEW

Time off section is just an empty redirect; the entire entitlement-system surface is missing

Where to see: Avatar → Account settings → My account → Time off.

Portal: Section body reads *"No time-off requests yet. Submit requests from the Ops page."* and that's it. No **+ Request time off** button. No status sections (Pending review / Approved / Denied / Past). No probationary banner. No quota balance display. No leave-type system. No attachment support. No Leave Guidelines link. The whole entitlement system the original ships from this surface is missing — the portal redirects users to a different page instead.

Original: Full Time-off surface lives here:

- Section copy explaining how the approval flow works + what an approved time-off looks like on the profile
- **Paid leave balance** card showing the two annual buckets (15 sick + 15 shared casual/emergency) or a probationary banner
- **Credit balance** ledger (holiday transfer credits)
- **+ Request time off** primary CTA
- Status-bucketed request list: Pending review (Edit + Cancel actions), Approved (upcoming + active), Denied (with Resubmit), Past approved
 - Each request shows the leave-type chip (Sick / Emergency / Casual), the date range, the reason, the paid/unpaid breakdown, and any uploaded supporting documents.
- **Leave Guidelines** link in the request modal header (read-only viewer).

Fix: Port the entire Time off surface from the original to portal. See `src/components/FlizowAccountModal.tsx` for the data model + UI (QuotaBalance, CreditSummary, request list rendering, TimeOffPeriodModal with leave-type + attachments + breakdown preview + guidelines link). Backing types in `src/types/flizow.ts` (TimeOffRequest, LeaveType, TimeOffAttachment, LeaveGuidelinesDoc). Annual quota math in `src/utils/timeOff.ts` (computeAnnualQuotaUsage, computeLeaveBreakdown). Store methods in `src/store/flizowStore.ts` (submitTimeOffRequest, approveTimeOffRequest, uploadTimeOffAttachment, updateLeaveGuidelines). The whole Phase 8 build is documented in the round 5 client-page QA — Operations explicitly asked for this surface, the Ops page is the approver's surface, not the requester's.

HIGH

NEW

Members admin missing invite link, pending invites, role filters, sort/group, cap inputs, employment status

Where to see: Avatar → Account settings → Workspace → Members. Compare the surface end-to-end.

Portal: List view only. Search input + member count ("MEMBERS · 36") + rows of avatar + name + ADMIN pill (where applicable) + email + right-column subtitle. No admin actions, no filtering, no role management visible at first glance — owners can see members but can't manage them from this surface.

Original: Full member-admin surface:

- **Invite teammate** section — role dropdown (Member / Admin / Viewer) + Generate link button that mints a one-time invite URL
- **PENDING** section listing outstanding invites with Revoke action + created-at relative time
- Search + Sort by (Name / Role / Joined) + Group by (None / Role / Job title) dropdowns
- Role filter chips: Owner / Admin / Member / Viewer
- Per-member **cap inputs** (soft / max — daily slot caps that drive the capacity heatmap)
- Per-member **employment status** dropdown (Probationary / Regular) gating paid-leave entitlement
- YOU pill on your own row + ACCOUNT pill marking the account-holder
- Member removal action (Owner cannot be removed; ownership transfer is a separate flow)

Fix: Port the full Members admin surface. The dev's current portal Members view is essentially a read-only directory; ours is the workspace control panel. Without the invite + pending + role + cap + employment-status controls, an Owner can't actually manage their workspace from this screen. See *FlizowAccountModal.tsx* MembersSection + MembersListControls + CapInputs + EmploymentInputs for the rendering + handlers. Store methods: createInvite, revokeInvite, changeMemberRole, removeWorkspaceMember, updateMember.

HIGH

FROM PREVIOUS QA

Holidays admin: portal is read-only listing; original is full country-sync + import/export + per-row CRUD

Where to see: Avatar → Account settings → Workspace → Holidays.

Portal: Static read-only list of holidays with date + name + country pill. No **Workspace countries** section. No Sync button. No country picker. No state-only / non-working day variants. No Backup/Portability section. No per-row Edit / Archive / Delete (R4 #8 still open). No country filter (R4 #9 still open). No credit-expiry policy radio (R4 #10 still open).

Original: Full holiday-management surface:

- **Workspace countries** section — each country card shows last-synced time + **Sync** button (pulls this year + next year's public holidays from *date.nager.at*) + variant-add buttons (+ *Add AU state-only days*, + *Add PH non-working days*) + Remove
- Add-country dropdown picker + Add button
- **Backup + portability:** Export the holiday catalog to JSON, Import from JSON on another workspace
- Per-holiday row actions (edit observation default, archive, delete custom holiday)
- Country filter chips at the top of the list
- Credit-expiry policy radio: End-of-year / 6 months / 12 months / Never (governs holiday transfer credit lifetime)

Fix: Port the full Holidays admin surface. Backing code: *src/utils/holidaySync.ts* (fetchHolidaysForRange via *date.nager.at*), *src/utils/holidayExport.ts* (buildHolidayExport / parseHolidayImport), *src/data/holidayPacks.ts* (per-country seeds + state/non-working day extensions). Without this surface, an Owner can't keep the holiday catalog current — the entire time-off / capacity / credit-ledger machinery depends on it.

MED severity

MED

FROM PREVIOUS QA

Trash empty-state copy implies limited scope ("templates, notes, and archived items")

Where to see: Avatar → Account settings → Workspace → Trash → empty-state copy under the trash icon.

Portal: *"Deleted templates, notes, and archived items across the workspace will appear here."* The three-noun list suggests Trash only catches those kinds.

Original: Trash catches every soft-deletable kind: clients, services, tasks, ops tasks, contacts, quick links, notes, touchpoints, action items, task comments, checklist items, onboarding items, manual agenda items, time-off requests, and templates. Cascade deletes (delete client → services → tasks → comments) bundle into a single TrashEntry for atomic restore.

Fix: Broaden the empty-state copy: *"Recently deleted items from across the workspace. Restore or permanently remove them here."* Or list the actual covered kinds. Don't undersell the scope — operators reading this think Trash doesn't cover the bulk of their data and lose trust in soft-delete.

MED

NEW

Trash list missing search, Empty Trash action, time-bucketed sections, and per-row Restore / Delete forever

Where to see: Avatar → Account settings → Workspace → Trash. With items in trash.

Portal: Even when items exist, the portal shows just the empty-state icon + copy on the test session. No way to scan deleted items, search them, restore individually, or permanently delete forever. No bulk Empty Trash action.

Original: Search input ("Search trash") + **Empty Trash** bulk action (red, danger-styled). Entries grouped by time bucket: TODAY · N / EARLIER THIS WEEK · N / EARLIER THIS MONTH · N / OLDER · N. Each row: kind icon + preview title + parent label (e.g. "— Acme Corporation") + kind tag + relative time + per-row **Restore** and **Delete forever** buttons.

Fix: Build out the Trash view. Backing data is already in `FlizowData.trash[]` on the store. UI: search filter + time-bucket grouping + per-row Restore (calls `store.restoreFromTrash(entryId)`) + Delete forever (calls `store.purgeFromTrash(entryId)`) + bulk Empty Trash (calls `store.emptyTrash()`).

MED

NEW

Profile section missing the **WORKSPACE DATA** / Load demo data action

Where to see: Avatar → Account settings → My account → Profile → bottom of the section.

Portal: Profile section ends after the **ROLE / TITLE + TIME ZONE** row. No **WORKSPACE DATA** section, no Load demo data action. The Profile body is noticeably empty at the bottom.

Original: Bottom of Profile has a **WORKSPACE DATA** eyebrow + **Load demo data** button with explainer copy *"Seeds the mockup's 50 demo clients"*. Useful for new accounts or design reviews.

Fix: Add the **WORKSPACE DATA** section to the Profile tab on portal. The Load demo data action seeds the workspace with demo clients + services + tasks + notes — same payload used in `src/data/demoData.ts` on the original.

MED

NEW

Job titles missing colour dots, kind classification, member counts, and Edit / Archive actions

Where to see: Avatar → Account settings → Workspace → Job titles.

Portal: Flat list of 36 titles. Each row: title text + trash-icon Delete button. No colour, no kind (Account Manager vs Operator), no member count per title. Add via inline input + Add button at the top.

Original: 5 seeded titles by default (workspace owner can extend). Each row:

- Colour dot (per-title accent — drives the title pill on the profile + AM filtering)
 - Title name + sub-line "*<kind> · N members*" showing the JobTitleKind (Account manager / Operator) + live member count
 - Three actions per row: **Edit** (rename, change colour, change kind), **Archive** (hide from picker but keep on existing members), **Delete** (remove entirely)
- Add via *Add job title* trigger link (opens an inline form), not a permanent input + Add button.

Fix: Extend the JobTitle schema with colour + kind (JobTitleKind: 'account-manager' | 'operator') + archived flag. Surface the three actions per row. Render member count via live count from `members.filter(m => m.jobTitleId === id)`. Subtitle copy on the section should describe what job titles drive (the profile pill, AM filtering, later coverage rules).

MED

NEW

Sign-in: "Sign out everywhere" + Google account "Manage" link both missing

Where to see: Avatar → Account settings → Account → Sign-in.

Portal: Just the Google identity card with email + single **Sign out of Portal** button (this device only). No way to revoke other sessions. No link to manage the Google account.

Original: Same Google card + **Manage** ■ link to *myaccount.google.com* for password / 2FA / etc. **Two** sign-out buttons:

- **Sign out of Flizow** (outlined, this device only)
- **Sign out everywhere** (red danger, revokes every active session — other devices sign out within seconds)

Helper text below explains the difference.

Fix: Add the Manage ■ link (Google account portal) and the **Sign out everywhere** button. "Sign out everywhere" is a real security control — without it, a user who suspects their account is compromised on a different device has no way to force a sign-out without changing their Google password.

LOW severity

LOW

FROM PREVIOUS QA

Profile ROLE / TITLE placeholder is "admin" (lowercase access role) instead of formatted title

Where to see: Avatar → Account settings → My account → Profile → ROLE / TITLE field.

Portal: Empty input with placeholder "admin" (lowercase). The string suggests the access role is being piped straight into the field without formatting or job-title lookup.

Original: Field populated with "Owner" (capitalized, role-derived).

Fix: Two options: capitalize + format the access role (*admin* → *Admin*) or pull the member's job-title label from the catalog and use that. Pull-from-catalog matches the original's intent — ROLE / TITLE was always meant to be the editable job title, not the access role pill.

LOW

FROM PREVIOUS QA

Members list right column mixes job titles and access-role labels

Where to see: Avatar → Account settings → Workspace → Members → right column on each row.

Portal: Right column is a mix: some rows show job titles (SEO Specialist, Managing Director, Google Ads Specialist), some show access roles (Admin, Team Member). Inconsistent treatment within the same list.

Original: Right column consistently shows the job-title label. Access role surfaces separately as the pill next to the member name.

Fix: Backfill job titles for the unmigrated members (Boris Desmond etc. that currently show "Team Member"). The right column should always show the job title; the access role lives in the pill, not in the right column.

LOW

NEW

Preferences subtitle + Time-format helper copy diverge from the original

Where to see: Avatar → Account settings → My account → Preferences.

Portal: Subtitle: *"Appearance and display settings."*

Time format helper: *"How times are displayed across the portal."*

Original: Subtitle: *"Changes save instantly."* (tells the user their click is the commit — no Save button needed for this section)

Time format helper: *"How due dates and meetings display."* (names the specific downstream surfaces affected)

Fix: Adopt the original copy. The auto-save subtitle explains a real behavior the user needs to know; "Appearance and display settings" is throwaway redundancy with the section title.

LOW

NEW

Notifications subtitle + footer note diverge from the original

Where to see: Avatar → Account settings → My account → Notifications.

Portal: Subtitle: *"What shows up in the bell and how."*

Footer: *"Email digests are coming in a future update. These settings control the in-app bell only."*

Original: Subtitle: *"Controls what shows up in the bell at the top of the page."* (specific location named)

Footer (italic): *"Email digests, mention alerts, and per-channel controls land when email delivery wires up."* (named three specific future features)

Fix: Adopt the original copy. Less generic, more honest about what's coming.

LOW

NEW

Avatar dropdown wording: "Light mode" (portal) vs "Light theme" (original)

Where to see: Click your avatar at top-right → dropdown.

Portal: Item reads **Light mode**.

Original: Item reads **Light theme**.

Fix: Minor copy choice — "theme" matches Apple HIG + macOS conventions and is the term the Preferences section itself uses (Light / Dark / System). Aligning the avatar dropdown to "theme" keeps the vocabulary consistent across two surfaces that drive the same setting.

INFO

NEW

Member + Viewer role visibility — couldn't test in this round (no test accounts)

Where to see: N/A — would require signing in as a Member-role or Viewer-role account on the portal.

Portal: Test session is logged in as ADMIN. Without a separate Member-role and Viewer-role test account on portal, I couldn't verify that the role-gated sections (WORKSPACE group + Members admin actions + Holidays admin actions) hide correctly for those roles. Currently logged-in user on the original is OWNER.

Original: On the original: WORKSPACE group hides entirely from Members + Viewers (since they can't manage:workspace). Members section: Members + Viewers see the list but can't see Cap inputs, Employment status, or member-remove actions. Time off: every role can submit own requests.

Fix: Spin up a test account on portal as Member-role and Viewer-role so we can verify the gating in the next round. The portal's permission gate should mirror the original's *can(role, 'manage:workspace')* check.

Build checklist

Every actionable finding (HIGH / MED / LOW). INFO items are listed in the body but not in the checklist. Tick each as it ships.

- ☐ **HIGH** **Sidebar missing "Workspace" section entirely — owners can't set workspace identity (name, initials, colour, logo)**
Add the Workspace sidebar section as the first item in the WORKSPACE group. Fields: workspace name, initials (2-letter abbreviation), colour picker, logo upload (preview + remove), creation date. Owner + Admin write access.
- ☐ **HIGH** **Time off section is just an empty redirect; the entire entitlement-system surface is missing**
Port the entire Time off surface from the original to portal. See *src/components/FlizowAccountModal.tsx* for the data model + UI (QuotaBalance, CreditSummary, request list rendering, TimeOffPeriodModal with leave-type + attachments + breakdown preview + guidelines link). Backing types in *src/types/flizow.ts* (TimeOffRequest, LeaveType, TimeOffAttachment, LeaveGuidelinesDoc). Annual quota math in *src/utls/timeOff.ts* (computeAnnualQuotaUsage, computeLeaveBreakdown). Store methods in *src/store/flizowStore.ts* (submitTimeOffRequest, approveTimeOffRequest, uploadTimeOffAttachment, updateLeaveGuidelines). The whole Phase 8 build is documented in the round 5 client-page QA — Operations explicitly asked for this surface, the Ops page is the approver's surface, not the requester's.
- ☐ **HIGH** **Members admin missing invite link, pending invites, role filters, sort/group, cap inputs, employment status**
Port the full Members admin surface. The dev's current portal Members view is essentially a read-only directory; ours is the workspace control panel. Without the invite + pending + role + cap + employment-status controls, an Owner can't actually manage their workspace from this screen. See *FlizowAccountModal.tsx* MembersSection + MembersListControls + CapInputs + EmploymentInputs for the rendering + handlers. Store methods: createInvite, revokeInvite, changeMemberRole, removeWorkspaceMember, updateMember.
- ☐ **HIGH** **Holidays admin: portal is read-only listing; original is full country-sync + import/export + per-row CRUD**
Port the full Holidays admin surface. Backing code: *src/utls/holidaySync.ts* (fetchHolidaysForRange via date.nager.at), *src/utls/holidayExport.ts* (buildHolidayExport / parseHolidayImport), *src/data/holidayPacks.ts* (per-country seeds + state/non-working day extensions). Without this surface, an Owner can't keep the holiday catalog current — the entire time-off / capacity / credit-ledger machinery depends on it.

- ☐ **MED** **Trash empty-state copy implies limited scope ("templates, notes, and archived items")**
Broaden the empty-state copy: *"Recently deleted items from across the workspace. Restore or permanently remove them here."* Or list the actual covered kinds. Don't undersell the scope — operators reading this think Trash doesn't cover the bulk of their data and lose trust in soft-delete.
- ☐ **MED** **Trash list missing search, Empty Trash action, time-bucketed sections, and per-row Restore / Delete forever**
Build out the Trash view. Backing data is already in `FlizowData.trash[]` on the store. UI: search filter + time-bucket grouping + per-row Restore (calls `store.restoreFromTrash(entryId)`) + Delete forever (calls `store.purgeFromTrash(entryId)`) + bulk Empty Trash (calls `store.emptyTrash()`).
- ☐ **MED** **Profile section missing the WORKSPACE DATA / Load demo data action**
Add the WORKSPACE DATA section to the Profile tab on portal. The Load demo data action seeds the workspace with demo clients + services + tasks + notes — same payload used in `src/data/demoData.ts` on the original.
- ☐ **MED** **Job titles missing colour dots, kind classification, member counts, and Edit / Archive actions**
Extend the JobTitle schema with colour + kind (JobTitleKind: 'account-manager' | 'operator') + archived flag. Surface the three actions per row. Render member count via live count from `members.filter(m => m.jobTitleId === id)`. Subtitle copy on the section should describe what job titles drive (the profile pill, AM filtering, later coverage rules).
- ☐ **MED** **Sign-in: "Sign out everywhere" + Google account "Manage" link both missing**
Add the Manage  link (Google account portal) and the **Sign out everywhere** button. "Sign out everywhere" is a real security control — without it, a user who suspects their account is compromised on a different device has no way to force a sign-out without changing their Google password.
- ☐ **LOW** **Profile ROLE / TITLE placeholder is "admin" (lowercase access role) instead of formatted title**
Two options: capitalize + format the access role (`admin` → `Admin`) or pull the member's job-title label from the catalog and use that. Pull-from-catalog matches the original's intent — ROLE / TITLE was always meant to be the editable job title, not the access role pill.
- ☐ **LOW** **Members list right column mixes job titles and access-role labels**
Backfill job titles for the unmigrated members (Boris Desmond etc. that currently show "Team Member"). The right column should always show the job title; the access role lives in the pill, not in the right column.

- ☐ **LOW** **Preferences subtitle + Time-format helper copy diverge from the original**
Adopt the original copy. The auto-save subtitle explains a real behavior the user needs to know; "Appearance and display settings" is throwaway redundancy with the section title.
- ☐ **LOW** **Notifications subtitle + footer note diverge from the original**
Adopt the original copy. Less generic, more honest about what's coming.
- ☐ **LOW** **Avatar dropdown wording: "Light mode" (portal) vs "Light theme" (original)**
Minor copy choice — "theme" matches Apple HIG + macOS conventions and is the term the Preferences section itself uses (Light / Dark / System). Aligning the avatar dropdown to "theme" keeps the vocabulary consistent across two surfaces that drive the same setting.
