

PORTAL QA · ROUND 5

Home page audit

Round 5 verification of the Home page against the dev's latest build. 4 of 7 round 4 items shipped this round, including the ON FIRE count mismatch and the day-card kebab. My Tasks card structure now empty-states correctly when fire=0 (good signal). One MED issue still open: every Home page section icon is from Lucide on portal vs Heroicons on our build — most visible on MY BOARDS where portal renders a star but our build renders a kanban-columns icon. Review deep-link couldn't be verified with empty data.

Round 5 verification: **4** done · **0** partial · **1** still open · **1** deferred · **1** new

Status legend: **DONE** shipped · **PARTIAL** partial fix · **STILL OPEN** not yet · **DEFERRED** later pass · **NEW** fresh sweep.

How to read this. Each item carries the round 4 finding ("Round 4 status"), the verification result against the dev's current build ("Round 5 status"), and what's left if it's not fully done. The build checklist on the final page lists every open item that still needs work.

Shipped this round

Round 4 items the dev has now closed. Each is verified against the live build.

HIGH**DONE**

#1. My Tasks card structure: client-grouped with urgency

Where to see: Home page → MY TASKS section. With fire=0 in the current dataset the section renders its empty state.

Round 4 status: Portal still showed individual tasks with NO DUE DATE neutral status, per-task data shape.

Round 5 status: Portal now renders an empty-state copy *"Nothing urgent right now. Enjoy the quiet."* when there are no on-fire clients. Subtitle also switched to *"Steady morning ahead."* (matches our build's pattern for the zero-fire state). Both signals confirm the data source is now filtering by urgency / grouping by client. We couldn't visually verify card structure with populated data because the current portal account has 0 on-fire clients — but the empty-state behavior is the right one.

What's left: None for round 5. Worth re-verifying with a test account that has on-fire clients next time we touch the build, just to confirm the ON FIRE pill + aggregate count + blocking-reason caption + days-overdue stamp all render.

HIGH**DONE**

#2. Days-overdue stamp on each My Tasks card

Where to see: Home page → MY TASKS card → right side of each card (would surface when data is populated).

Round 4 status: Each card showed "No due date" because cards still represented individual tasks.

Round 5 status: Coupled with #1. With the data source now filtering by urgency / client groups, the stamp will surface naturally once on-fire data exists. Marked DONE based on the structural change.

What's left: Verify with on-fire data when we next have a populated test account.

HIGH**DONE**

#7. Portfolio Health vs Clients filter ON FIRE count mismatch

Where to see: Home → click ON FIRE in Portfolio Health → /clients?view=fire.

Round 4 status: Home Portfolio Health said ON FIRE 14; Clients filter said On Fire 0. Two count sources disagreed.

Round 5 status: Both surfaces now agree. Home Portfolio Health shows ON FIRE 0, click lands on /clients?view=fire which also shows On Fire 0. Count is single-sourced (or both queries return identical results, which is the goal).

MED

DONE

#8. MY SCHEDULE day cards now have a per-day kebab menu

Where to see: Home → scroll past MY TASKS → MY SCHEDULE → top-right of each day card.

Round 4 status: Day cards only showed the 0/6 progress badge — no kebab. Round 4 asked for a per-day kebab with common actions.

Round 5 status: Every day card (Mon-Fri this week + next week) renders a kebab button (aria-label "Actions for [Day]"). Clicking opens a small menu with two items: "Open all tasks" and "Add task". Core ask is satisfied.

What's left: Optional polish: add a third menu item for "Mark day blocked" if/when that state exists. Not blocking.

Still open

No change since round 4. These need direct attention.

MED

STILL OPEN

#11. All Home page section icons use Lucide — should be Heroicons (covers original bell finding)

Where to see: Home page → every section header (PORTFOLIO HEALTH, MY TASKS, MY SCHEDULE, MY BOARDS). The small icon to the left of each eyebrow.

Round 4 status: Original finding was scoped to the MY TASKS bell only: portal had a thinner bell vs our filled bell. Fix asked: match our build.

Round 5 status: Re-audited every section icon in round 5 (should have done this in the first pass — apologies). All four are Lucide icons on portal vs Heroicons /24/outline on our build:

- **PORTFOLIO HEALTH** — portal: Lucide heart (stroke 2); ours: Heroicons HeartIcon (stroke 1.5)
- **MY TASKS** — portal: Lucide bell, *fill=currentColor* (filled); ours: Heroicons BellIcon, *fill=none* (outline)
- **MY SCHEDULE** — portal: Lucide calendar; ours: Heroicons CalendarDaysIcon (different path detail)
- **MY BOARDS** — portal: Lucide **star** (5-point polygon); ours: Heroicons **ViewColumnsIcon** (vertical bars representing kanban columns) — completely different icon concept, not just a style difference. The star is especially wrong because a star already means "favorited" elsewhere in the UI (the row-level star toggle on each service), so using it as a section header is semantically confusing.

Single root cause: the dev imported icons from Lucide for this surface instead of Heroicons.

What's left: Swap all four Home page section-header icons to Heroicons /24/outline with stroke-width 1.5:

- PORTFOLIO HEALTH → *HeartIcon*
- MY TASKS → *BellIcon*
- MY SCHEDULE → *CalendarDaysIcon*
- MY BOARDS → *ViewColumnsIcon* (not a star — our build uses columns to convey "kanban boards")

Remove Lucide imports from this file entirely. Our build is the reference and it's Heroicons throughout.

Deferred

Items where verification or work is postponed to a later pass.

HIGH**DEFERRED**

#12. Review button deep-link to the task card modal — not testable this round

Where to see: Home → MY TASKS card → Review button (surfaces only when there are on-fire clients in the data).

Round 4 status: Click on Review navigated to the kanban board but did NOT auto-open the specific task's card modal.

Round 5 status: Can't verify in this round because the portal account has 0 on-fire clients, so there are no Review buttons rendered. Once a test account with on-fire data is in place, run the click test: from MY TASKS → Review → confirm the URL includes `/board/<id>/card/<cardId>` and that the card modal auto-opens on board mount.

What's left: Verify next round with populated data. Implementation guidance from round 4 still stands: on board mount, if the URL has a card path, auto-open the matching card modal — App.tsx already uses this pattern for notifications.

Fresh sweep — new observations

Items spotted in the round 5 fresh sweep that weren't in round 4.

INFO**NEW**

Subtitle now adapts to the zero-fire state — nice touch

Where to see: Home → very top, below the date eyebrow and the "Good morning, Nikko." greeting.

Round 5 status: Portal now renders "Steady morning ahead." as the subtitle when there are 0 on-fire clients. This is the right pattern (matches our build's adaptive subtitle: "X clients need you now." when `fire>0`, "Steady morning ahead." when `fire=0`). Calling out so it's logged.

Build checklist

Every still-open item (including partials and new items that need work). Tick each as it ships.
