

PORTAL QA · ROUND 1

Workflow 10 · Empty + error states audit

May 15, 2026

Workflow 10 in the May 15 deep-testing pass. Surveyed empty + error states across major surfaces: Clients list (no selection), Trash, Account → Time off, new client (no services), board columns, time-off Approvals, Command Palette no-results. Plus one transient 502 observation.

2 findings: **0 HIGH**, **0 MED**, **0 LOW**, **2 INFO**.

2 findings · **0 HIGH** · **0 MED** · **0 LOW** · **2 INFO**

Status legend: **HIGH** blocks scanning / breaks workflow · **MED** meaningful divergence · **LOW** polish · **INFO** matches or working as intended.

Each finding carries two chips. **Severity** (HIGH / MED / LOW / INFO) maps to impact. **History tag** (**FROM PREVIOUS QA** = carried over from prior QA, **NEW** = surfaced this round) shows which items the dev has been sitting on vs. fresh observations. **FROM PREVIOUS QA** items need triage first.

Functional · INFO severity (verified working)

INFO

NEW

Verified working: empty states across major surfaces are consistent + clear

Where to see: Various surfaces: Clients before selecting one, Trash, Account → Time off, new service board, About tab Contacts, Command Palette no-results.

Portal: Empty states surveyed:

- **Clients right pane** (no client selected): "Select a client / Pick a row on the left to see their services, activity, and notes."
- **Account → Trash:** "Workspace trash is empty / Deleted templates, notes, and archived items across the workspace will appear here."
- **Account → Time off:** "No time-off requests yet. Submit requests from the Ops page." (Note: directive itself is wrong per spec; see Workflow 4.)
- **New client** (no services): "No services yet / Projects linked to this client will appear here." + "+ Add service" CTA.
- **Board column:** "No cards yet — drag one in from another list."
- **Time off Schedules Approvals tab:** "No pending requests."
- **Command Palette:** "NO RESULTS / No matches for "Acme". Try a client name, a task, or a command like Go to Analytics."

Consistent copy register, consistent visual treatment (centered text + icon + muted color). No "data is missing" states that read as broken.

Original: Same shape.

Fix: None. Empty states are well-designed across the surface.

INFO

NEW

Observed transient: portal returned 502 Bad Gateway once during the QA session

Where to see: Happened once after I navigated between client detail views in Workflow 1 — likely after the broken-delete attempt.

Portal: Brief 502 Bad Gateway page rendered for ~5 seconds, then the portal returned to normal on retry. Not blocking. Could be an unrelated dev-environment hiccup or could be tied to the broken-delete flow putting the backend in a weird state.

Original: n/a (no live portal on source).

Fix: If the 502 correlates with the broken-delete attempt, investigate the server-side delete endpoint. Otherwise no action needed; transient 502s on a dev environment are expected.

Build checklist

Every actionable finding (HIGH / MED / LOW). INFO items are listed in the body but not in the checklist. Tick each as it ships.
