

PORTAL QA · ROUND 1

Workflow 9 · Routing audit

May 15, 2026

Workflow 9 in the May 15 deep-testing pass. Tested URL routing on the portal: direct navigation by pasting URLs, refresh persistence, browser back/forward, and the notification deep-link flow (covered in detail in Workflow 5).

2 findings: **1 HIGH**, **0 MED**, **0 LOW**, **1 INFO**.

2 findings · **1 HIGH** · **0 MED** · **0 LOW** · **1 INFO**

Status legend: **HIGH** blocks scanning / breaks workflow · **MED** meaningful divergence · **LOW** polish · **INFO** matches or working as intended.

Each finding carries two chips. **Severity** (HIGH / MED / LOW / INFO) maps to impact. **History tag** (**FROM PREVIOUS QA** = carried over from prior QA, **NEW** = surfaced this round) shows which items the dev has been sitting on vs. fresh observations. **FROM PREVIOUS QA** items need triage first.

Functional · HIGH severity

HIGH

FROM PREVIOUS QA

Notification-click route produces a doubled `/projects-v2/projects-v2/` URL prefix (carries from Workflow 5)

Where to see: Bell → click any notification.

Portal: URL becomes `/projects-v2/projects-v2/board/<id>`. Routing falls back to Home because the doubled prefix doesn't match any defined route. Same finding as Workflow 5 HIGH #1; restated here as a routing-layer bug since the URL construction is the root cause.

Original: URL is `#board/<serviceId>/card/<cardId>` and the route handler reads the card param to open the modal.

Fix: In the notification-link builder, the prefix `/projects-v2` is being concatenated on top of a path that already includes it. Inspect the helper that produces the href from a notification entity. Strip the duplicate prefix at the construction site.

Functional · INFO severity (verified working)

INFO

NEW

Verified working: direct URL navigation + hash routing

Where to see: Paste any portal URL into the address bar: `/projects-v2/clients/<id>`, `/projects-v2/board/<id>`, `/projects-v2/templates`, `/projects-v2/ops`.

Portal: All routes render their pages correctly on direct paste. Refresh preserves state (the URL drives the view, not in-memory state). Browser back/forward respects history. Clients filter (Archived chip) is URL-bound.

Original: Same.

Fix: None. Routing works for legitimate URLs.

Build checklist

Every actionable finding (HIGH / MED / LOW). INFO items are listed in the body but not in the checklist. Tick each as it ships.

**HIGH****Notification-click route produces a doubled `/projects-v2/projects-v2/` URL prefix (carries from Workflow 5)**

In the notification-link builder, the prefix `/projects-v2` is being concatenated on top of a path that already includes it. Inspect the helper that produces the href from a notification entity. Strip the duplicate prefix at the construction site.
