

10 workflows walked end-to-end

Findings + TEST-data cleanup notes + the wins the dev has shipped between rounds.

The 10 workflow docs

#	Workflow	PDF	Headline finding
1	Client lifecycle	may-15-client-lifecycle-qa.pdf	Delete client does not work on archived clients; AM selection from Add Client form is not persisted
2	Service lifecycle	may-15-service-lifecycle-qa.pdf	Mostly shipped — 13 prior findings verified closed; 4 small items remain (column kebab popover, star/date placement, Members chip, effort placeholder)
3	Card lifecycle	may-15-card-lifecycle-qa.pdf	Card title is not click-to-rename — cursor renders as grab but no inline-edit fires
4	Time-off	may-15-time-off-qa.pdf	Submission UI lives on Ops not Account; request form missing Type, Hours, and Use Transfer Credit fields
5	Notifications + deep-link	may-15-notifications-qa.pdf	Click on any notification produces a doubled /projects-v2/ URL prefix and routes to Home instead of the intended target
6	Command Palette (⌘K)	may-15-search-palette-qa.pdf	Palette opens + commands work, but typing a client name returns NO RESULTS — clients/tasks/people indexes aren't wired
7	Templates	may-15-templates-qa.pdf	Cleanest surface — most Templates R6 findings shipped. One LOW: Custom template PHASES prompt still drifts from source italic copy

8	Account settings	may-15-account-settings-qa.pdf	Trash is empty despite the failed Delete attempts in Workflow 1 — confirms portal Delete is a no-op at the data layer
9	Routing	may-15-routing-qa.pdf	Direct URL navigation works; notification deep-link doesn't (same root cause as Workflow 5)
10	Empty + error states	may-15-empty-error-states-qa.pdf	Empty states are well-designed across the surface; one transient 502 observed

Top HIGH findings (triage first)

- **Delete client doesn't work on archived clients.** Confirmation dialog dismisses but the record persists (Workflow 1 + Workflow 8). Combined with the missing Restore option, archived clients are unreachable dead weight on the portal.
- **AM selection from Add Client form is dropped at save.** Required-field validation passes, form submits, but *Client.amId* is never written (Workflow 1).
- **Archive overwrites status pill to "On Track".** Archived clients lose their pre-archive status (Workflow 1).
- **Notification click produces a doubled URL prefix + lands on Home.** Breaks the alert-and-act flow (Workflows 5, 9).
- **Command Palette search ignores clients/tasks/people.** Only commands work; placeholder claims four sources but three aren't wired (Workflow 6).

TEST data cleanup notes

All test entities created during this pass were prefixed with **TEST** in all caps per Nikko's instruction. Because the Delete bug is genuinely broken on archived clients, I could not clean these up via the UI. List below shows what remains in the workspace.

- **TEST CLIENT 1 - MAY 15 QA** — sits in the Archived bucket on the Clients page. Created in Workflow 1, archive worked, delete failed twice. Status incorrectly reads "On Track" (per Workflow 1 HIGH #3). Industry: TEST INDUSTRY. AM: should have been Abby Dequeros but didn't persist (Workflow 1 HIGH #2).
- **TEST SERVICE 1 - MAY 15 QA** on Acme Corp — created in Workflow 2 with the Account Management template. Board renders 83 cards seeded from the template, plus my TEST comment on the "N/A — not applicable for this team in this phase" card. The service can be archived from the Edit Services flow on Acme Corp once the broken-delete bug ships.
- **TEST comment** reading "TEST comment for QA - May 15" on the card above. Posted via the Enter-to-send wire in Workflow 2 to verify the comment input works.

Cleanup steps after the Delete bug ships: find TEST CLIENT 1 in the Archived bucket → Restore (once the Restore option ships from the additional-requests doc) → in active state, Delete via kebab (should land in Trash). The TEST service on Acme Corp + its TEST comment can stay or get removed via the Edit Services flow.

Wins shipped between rounds

The dev has shipped a significant chunk of prior QA findings between the last QA pass and this one. Most visible on the Templates + Kanban-board + Add-service surfaces. Specifically:

- **Template seeding works** — picking Account Management on Add Service now materialises 83 cards in TO DO (was empty; killer add-service-qa-round1 finding).
- **Breadcrumb shows the right client name** on board views (was the literal "Client"; kanban-r1 HIGH #1).
- **Card modal has Checklist + comment input + Enter-to-send** with the correct "(Shift+Enter for new line)" placeholder. Comment posts successfully (kanban-r1 HIGH #4).
- **Board top-right has Settings + Analytics buttons** (was missing; kanban-r1 HIGH #3 mostly).
- **Toolbar has all six filter controls** (Priorities/Assignees/Labels/Dates/Sort/Group; kanban-r1 MED).
- **Column headers UPPERCASE + per-column kebab** (kanban-r1 MED).
- **Card modal dates use American format** (kanban-r1 LOW).
- **Share button in card modal header** (kanban-r1 LOW).

- **Templates page header rebuilt** — framed icon, no descriptive subtitle, clean chip row (templates-r6 HIGH #1).
- **Sidebar template rows no longer show coloured category pills** (templates-r6 HIGH #2).
- **"Click any field to edit" hint pill returned to brand blue** (templates-r6 LOW).
- **RESET TO DEFAULT renders on Account Management** (templates-r5 HIGH #1).
- **Empty column copy matches the original** ("No cards yet — drag one in from another list."; kanban-r1 LOW).

Roughly **13 prior findings verified shipped** in this pass. The dev is moving fast. The 7 HIGH items that remain are concentrated in the destructive-action paths (delete, archive, restore) and the data-wiring paths (AM persist, palette search index, notification URL construction). Those are the right next targets.
