

PORTAL QA

Home page gaps vs the dev build

Side-by-side comparison of the deployed portal (dev.portal.121group.io/projects-v2) and the dev build (nikkortrinidad-cpu.github.io/flizow). Lists every functional and visual gap the portal needs to close to match.

Severity legend: **HIGH** blocks parity · **MED** visible behavioral gap · **LOW** cosmetic.

Top of page

Greeting, Portfolio Health, and the start of My Tasks. The biggest structural gap on this page is in My Tasks card design.

Dev build (target)

Our version: dark mode, on-fire client cards with two actions and overdue stamps.

Portal (current)

Portal: individual task cards, no urgency cues, single Review action.

Bottom of page

My Schedule and My Boards. Schedule looks identical in both. My Boards (ours) and My Projects (portal) are different concepts.

Dev build (target)

Our version: My Schedule (Mon-Fri) followed by My Boards with a star-pin empty state.

Portal (current)

Portal: same My Schedule strip, then MY PROJECTS (12 active) replaces our My Boards section.

Punch list

Every gap, ranked by impact. Each item names what our build has, what the portal has today, and what the portal needs to add.

HIGH #1. My Tasks card structure: client-grouped with urgency, not flat task list

Our version: Each card represents an on-fire client (e.g. Acme Corporation). The card shows an **ON FIRE** red status pill, an aggregate count line ("1 overdue · 1 blocked"), and a blocking reason caption ("Blocked: Budget approval stalled").

Portal version: Each card represents one individual task (e.g. "Review new ClickUp changes") with a NO DUE DATE neutral status and a project breadcrumb. No urgency signal, no aggregation.

What to add: Switch the data source to group tasks by their parent client and surface only on-fire clients. Add the ON FIRE pill, aggregate counts, and the blocking-reason caption.

HIGH #2. Days-overdue stamp on each My Tasks card

Our version: Right-aligned timestamp like "9 days overdue", "7 days overdue", "3 days overdue" on each card. Calculated from the latest overdue task in that client.

Portal version: Right-aligned label always says "No due date" because every card is one task, none of which has a due date in the data.

What to add: Compute the most-overdue task in each client group and render its delta in days. Required even on cards where the underlying task has no due date if other tasks in the same client do.

HIGH #3. Delegate button on My Tasks cards

Our version: Each card has two buttons side by side: **Delegate** (secondary, outline) and **Review** (primary, solid blue).

Portal version: Each card has only the **Review** button.

What to add: Add the Delegate action. Should open the same delegation flow used inside the kanban modal (assignee picker).

HIGH #4. My Boards (favorited services) section

Our version: Below My Schedule there's a **MY BOARDS** section. Empty state reads "No boards favorited yet. Open any client and tap the star on a service to pin its board here." with a "Browse clients →" CTA.

Portal version: Section is replaced by **MY PROJECTS** (12 active), a horizontal-scrolling list of every active project. Different concept entirely.

What to add: Add the My Boards favorited-services section. Either replace My Projects with My Boards, or keep both as stacked sections (My Boards above, My Projects below).

MED

#5. Subtitle copy under the greeting

Our version: Reads "4 clients need you now." The count is just the on-fire clients.

Portal version: Reads "14 clients need you now." The count appears to include both on-fire and at-risk.

What to add: Confirm which definition is correct, then make both versions match. Likely should be on-fire only.

MED

#6. TopNav brand label

Our version: Logo reads "Projects" in white/dark mode-aware text.

Portal version: Logo reads "Projects V2" in purple. The "V2" tag suggests an in-progress build, not a shipped product.

What to add: Drop the "V2" suffix. Match the brand color to ours (white in dark mode).

LOW

#7. Back arrow in TopNav

Our version: No back arrow. The app is the top-level surface.

Portal version: A back arrow sits at the far left of the TopNav. Likely links back to the outer 121 Group portal shell.

What to add: Acceptable if the portal needs a return path. Make sure it doesn't break the visual rhythm of the nav. If kept, no action needed for parity.

Note on data state: the portal is rendering live 121 Group data (133 active clients, real internal tasks). Our build is rendering demo data (45 active clients, scripted on-fire scenarios). Differences in absolute numbers (4 vs 14, 45 vs 133) are not gaps; they reflect different underlying datasets. Behavioral and structural gaps above remain valid regardless of data.
