

PORTAL QA · ROUND 4

Templates page audit

May 12, 2026

First QA pass on the Templates page. 6 findings across the left rail (counts, archived section, category chips) and the template detail (RESET TO DEFAULT action, brief-field defaults, header icon styling). Headline items: the portal has no RESET TO DEFAULT path so accidental edits to a built-in template are unrecoverable, and PROJECT BRIEF FIELDS ship empty on every template — the original seeds sensible defaults per service type so a fresh service kanban opens with the right prompts. The category-chip pattern in the left rail is a portal addition the original doesn't have; flagged for a deliberate keep-or-drop decision.

6 findings · 0 HIGH · 2 MED · 4 LOW · 0 INFO

Status legend: **HIGH** blocks scanning / breaks workflow · **MED** meaningful divergence · **LOW** polish · **INFO** matches or working as intended.

Each finding carries two chips. **Severity** (HIGH / MED / LOW / INFO) maps to impact. **History tag** (**FROM PREVIOUS QA** = carried over from prior QA, **NEW** = surfaced this round) shows which items the dev has been sitting on vs. fresh observations. **FROM PREVIOUS QA** items need triage first.

Header + left rail

LOW

NEW

Header eyebrow shows one total count; the original splits active vs archived

Where to see: Top → Templates → top of the left rail, above the "Templates" title.

Portal: "23 TEMPLATES" — a single total count rolling active and archived together.

Original: "6 ACTIVE · 1 ARCHIVED" — two counts separated by a middle dot. Tells the owner at a glance how many templates are in active use vs parked, without scrolling the list.

Fix: Split the count: "<active> ACTIVE · <archived> ARCHIVED". Omit the archived half when the count is zero so a clean workspace reads as "6 ACTIVE" rather than "6 ACTIVE · 0 ARCHIVED".

LOW

NEW

No "Archived" expandable section at the bottom of the template list

Where to see: Top → Templates → bottom of the left rail (below the active templates).

Portal: Active templates scroll to the bottom of the rail with no "Archived" affordance. There's no path to view, restore, or permanently delete archived templates from this surface.

Original: Bottom of the rail anchors a collapsed "■ ARCHIVED · <count>" row. Clicking it expands the archived list inline so the owner can scan them without navigating away. Each archived template carries an "Unarchive" action.

Fix: Add the collapsed Archived section + per-row Unarchive action. Pairs with the ARCHIVE button in the template header — the workflow only makes sense if archived templates have a visible home.

LOW

NEW

Template-row tag chips: portal renders a colored category chip; the original doesn't

Where to see: Top → Templates → each row in the left rail. On portal: chip beside each template name (SEO, Brand, Content, design, general, web_dev, social, etc.).

Portal: Every template row carries a small colored chip next to the name labeling the template's category. Some labels look workspace-defined ("mark edit test"); others map to obvious kinds (SEO green, design pink, web_dev blue). The chip is a real piece of data — the editor must let the owner set it.

Original: Template rows show *icon · name · sub-line* ("X phases · Y onboarding items") — no category chip. Type/category isn't a tracked field in the original template schema.

Fix: Decision required:

- **Keep the portal pattern.** If categories are useful for organising templates (SEO, Brand, etc.), add the field to the template schema + an editor on the right pane + the chip renderer in the left list. Cap to a curated palette so workspace tags don't drift like the current "mark edit test" string suggests they do.

- **Match the original.** Drop the chip column in the rail. Templates are organised by name + their phase-count summary, no tags.

Worth a Nikko call — the portal added a piece of structure the original doesn't have, so this isn't a defect, it's a choice.

Template detail (right pane)

MED

NEW

"RESET TO DEFAULT" action is missing from the template header

Where to see: Top → Templates → select any built-in template → top-right of the header next to ARCHIVE.

Portal: Header carries one action button: **ARCHIVE**. No way to undo accidental edits to a built-in template — a typo on a phase name or a deleted-then-recreated subtask leaves the template permanently drifted from its seed.

Original: Header carries two actions: **RESET TO DEFAULT** (text-link tier) + **ARCHIVE** (outline pill). Reset rebuilds the template from its built-in seed, restoring the original phases + subtasks + onboarding checklist + brief fields. Confirmation dialog warns the user before destroying their edits.

Fix: Add the **RESET TO DEFAULT** action to the header for built-in templates only (workspace-created custom templates don't have a default to reset to). Tier: text-link (the lowest tier of the blue-highlight hierarchy) — it's a destructive but rare action, not a CTA. Confirm the cascade in a modal listing exactly what gets overwritten.

MED

NEW

Brief-field defaults aren't seeded on new templates

Where to see: Top → Templates → select a template → scroll to the PROJECT BRIEF FIELDS section near the bottom.

Portal: Section renders the title + subtitle + **+ Add field** button only. No starter chips. The Account Management template ships with zero brief fields even though brief fields are the primary way a kanban board's brief panel gets populated.

Original: Every built-in template seeds a sensible set of brief fields the AM can prune or extend: *Goals · Target audience · Success metrics · Competitors · Must-keep features · Out of scope · Timeline milestones* for a Web Design template; different sets per service type. The chips render in a wrapping row above the **+ Add field** button.

Fix: Seed each built-in template with brief-field defaults that fit its service type. The chips need to actually save to the template + flow to the kanban board's brief panel on service creation — without that, a fresh service starts with an empty brief and the AM has to recreate the same seven fields every time.

LOW

NEW

Template-tile icon: portal uses a tinted square; the original uses a single-color glyph

Where to see: Top → Templates → top-left of the right pane, next to the template's title.

Portal: Large square tile (~56px) with a tinted background matching the template's category colour, holding a centered icon (trending-arrow for SEO, etc.). High visual weight — competes with the template title for attention.

Original: Smaller icon (~28px) with no background, rendered in *--text-soft*. Lives left of the title at ascender height so the title anchors the row. Visual hierarchy: title wins, icon supports.

Fix: Match the original — drop the tinted-tile treatment and render the icon at the smaller single-color size. The category colour can live on the chip in the left-rail list (if the chip pattern survives the decision above); the right-pane icon should stay neutral so the title is the focal point of the detail view.

Build checklist

Every actionable finding (HIGH / MED / LOW). INFO items are listed in the body but not in the checklist. Tick each as it ships.

- ☐

LOW

Header eyebrow shows one total count; the original splits active vs archived
 Split the count: "<active> ACTIVE · <archived> ARCHIVED". Omit the archived half when the count is zero so a clean workspace reads as "6 ACTIVE" rather than "6 ACTIVE · 0 ARCHIVED".
- ☐

LOW

No "Archived" expandable section at the bottom of the template list
 Add the collapsed Archived section + per-row Unarchive action. Pairs with the ARCHIVE button in the template header — the workflow only makes sense if archived templates have a visible home.
- ☐

LOW

Template-row tag chips: portal renders a colored category chip; the original doesn't
 Decision required:

 - **Keep the portal pattern.** If categories are useful for organising templates (SEO, Brand, etc.), add the field to the template schema + an editor on the right pane + the chip renderer in the left list. Cap to a curated palette so workspace tags don't drift like the current "mark edit test" string suggests they do.
 - **Match the original.** Drop the chip column in the rail. Templates are organised by name + their phase-count summary, no tags.
 Worth a Nikko call — the portal added a piece of structure the original doesn't have, so this isn't a defect, it's a choice.
- ☐

MED

"RESET TO DEFAULT" action is missing from the template header
 Add the **RESET TO DEFAULT** action to the header for built-in templates only (workspace-created custom templates don't have a default to reset to). Tier: text-link (the lowest tier of the blue-highlight hierarchy) — it's a destructive but rare action, not a CTA. Confirm the cascade in a modal listing exactly what gets overwritten.
- ☐

MED

Brief-field defaults aren't seeded on new templates
 Seed each built-in template with brief-field defaults that fit its service type. The chips need to actually save to the template + flow to the kanban board's brief panel on service creation — without that, a fresh service starts with an empty brief and the AM has to recreate the same seven fields every time.
- ☐

LOW

Template-tile icon: portal uses a tinted square; the original uses a single-color glyph
 Match the original — drop the tinted-tile treatment and render the icon at the smaller single-color size. The category colour can live on the chip in the left-rail list (if the chip pattern survives the decision above); the right-pane icon should stay neutral so the title is the focal point of the detail view.
