

PORTAL QA · ROUND 1

Workflow 3 · Card lifecycle audit

May 15, 2026

Workflow 3 of 10 in the May 15 deep-testing pass. Tested card-level interactions on the TEST SERVICE 1 - MAY 15 QA board: open card detail modal, inspect all field types, exercise the kebab actions popover.

Result: largely clean. One Functional MED open — card title is not click-to-rename, matching the same pattern noticed on the client title earlier. The rest of the card modal works as intended (3 INFO entries confirming what's working).

Most card-level behaviours were already verified in Workflow 2 (comments + Enter-to-send + Share + Activity Log + American date format + Checklist + comment input). This doc only covers the new ground specific to card interactions.

4 findings · 0 HIGH · 1 MED · 0 LOW · 3 INFO

Status legend: **HIGH** blocks scanning / breaks workflow · **MED** meaningful divergence · **LOW** polish · **INFO** matches or working as intended.

Each finding carries two chips. **Severity** (HIGH / MED / LOW / INFO) maps to impact. **History tag** (**FROM PREVIOUS QA** = carried over from prior QA, **NEW** = surfaced this round) shows which items the dev has been sitting on vs. fresh observations. **FROM PREVIOUS QA** items need triage first.

Functional · MED severity

MED

NEW

Card title is not click-to-rename — cursor renders as "grab" but no inline-edit affordance fires

Where to see: Open any card → click on the card title (large text at the top of the left pane, e.g. "Join discovery calls as needed to understand client needs").

Portal: Title element is a `<div class="card-title">` with *cursor: grab*, no `onClick` handler, no *contentEditable*, no *title* attribute, no *role*. Click does nothing. Hovering implies the title might be a drag handle (*cursor: grab*) but the title itself isn't draggable on the modal surface — it's a no-op cursor state. User has **no UI path to rename a card** after creation.

Same pattern as the client title finding from earlier QA — click-to-rename missing across multiple surfaces.

Original: Card title is wrapped in the inline-rename atom (the same one used on Templates breadcrumb, Notes title, Client hero). Click switches the title to a text input pre-populated with the current value. Enter commits, Escape cancels. The *cursor: text* style hints that the element is editable.

Fix: Same code shape as the client-title and kanban-breadcrumb rename fixes from the additional-requests doc:

- Wrap the title *div* with *role="button"*, *tabIndex="0"*, *title="Click to rename"*.
- *onClick* swaps the div for an inline `<input>` bound to *card.title*. Enter commits, Escape cancels.
- Also switch the cursor from *grab* to *text* so the hover state matches the actual affordance.

Functional · INFO severity (verified working)

INFO

NEW

Verified working: card detail modal opens on click + all field types render

Where to see: Open any card on a board.

Portal: Click on a card body opens the detail modal. Left pane contains: client-prefixed eyebrow, title, Status dropdown, Priority dropdown, Assignees (+ add), Effort (slots + ESTIMATED), Due date input, Start date input, Repeat dropdown, Labels (+ add), Description (click-to-edit), Checklist (+ Add Task), Created date footer. Right pane has Comments + Activity Log tabs with the comment input at the bottom. All field types render as expected.

Original: Same.

Fix: None. Working as intended.

INFO

NEW

Verified working: card kebab in modal header offers the standard four actions

Where to see: Open any card → kebab (■) in the top-right of the modal header.

Portal: Popover shows four options:

- Duplicate card
- Copy link
- Archive card
- Delete card (red, destructive)

Matches the spec in CLAUDE.md ("Kebab menu (■) for card-level actions (duplicate, copy link, archive, delete).").

Original: Same four actions.

Fix: None. Working as intended.

INFO

NEW

Verified working: post-create card consistency across the 83 seeded cards

Where to see: Open TEST SERVICE 1 - MAY 15 QA board → click any 5-6 cards in TO DO.

Portal: Every card seeded from Account Management template renders the same modal structure. All defaulted to Status: To Do, Priority: Medium, empty assignees, empty effort, empty dates. Title is the phase + subtask name (e.g. "Join discovery calls as needed to understand client needs"). Consistent rendering across the 83 template-seeded cards.

Original: Same.

Fix: None. Template seeding produces consistent card state.

Build checklist

Every actionable finding (HIGH / MED / LOW). INFO items are listed in the body but not in the checklist. Tick each as it ships.

MED

Card title is not click-to-rename — cursor renders as "grab" but no inline-edit affordance fires

Same code shape as the client-title and kanban-breadcrumb rename fixes from the additional-requests doc:

- Wrap the title *div* with *role="button", tabIndex="0", title="Click to rename"*.
- *onClick* swaps the div for an inline `<input>` bound to *card.title*. Enter commits, Escape cancels.
- Also switch the cursor from *grab* to *text* so the hover state matches the actual affordance.
